

ADP1829, APD210X and ADP171X Reference Design

Preliminary Technical Data

FCDC 00057

FEATURES

Seven Output Voltages: 5.0 V, 3.6 V, 3.3 V, 2.5 V, 1.8 V, 1.2 V, 0.9 V

Output Current: 0.002 A to 3.0 A

Input voltage: 10.8-13.2 V

Ripple 2% ppk of Output Voltage

Transient step ±5%, 50% max load

ADP1829, APD210X AND ADP171X REFERENCE DESIGN DESCRIPTION

This ADP1829, APD210X and ADP171X Reference Design uses 10.8 V to 13.2 V for the input voltage. The output voltages and currents are as follows:

- $V_{OUT1} = 3.6$ V with a maximum output current of 7.7 A for intermediate rail,
- $V_{OUT2} = 1.2$ V with a maximum output current of 3.0 A for VP,
- $V_{OUT3} = 1.8$ V with a maximum output current of 2.8 A for VP,
- $V_{OUT4} = 0.9$ V with a maximum output current of +/-0.5 A for VP,
- $V_{OUT5} = 3.3$ V with a maximum output current of 0.34 A for VP,
- $V_{OUT6} = 1.2$ V with a maximum output current of 0.1 A for VP,
- $V_{OUT7} = 3.3$ V with a maximum output current of 1.5 A for FPGA,
- $V_{OUT8} = 2.5$ V with a maximum output current of 1.6 A for FPGA,
- $V_{OUT9} = 1.8$ V with a maximum output current of 1.6 A for FPGA,
- $V_{OUT10} = 1.2$ V with a maximum output current of 0.5 A for FPGA,
- $V_{OUT11} = 2.5$ V with a maximum output current of 0.3 A for FPGA,
- $V_{OUT12} = 1.8$ V with a maximum output current of 1.95 A for DVI,
- $V_{OUT13} = 0.9$ V with a maximum output current of +/-0.5 A for FPGA,
- $V_{OUT14} = 3.3$ V with a maximum output current of 1.55 A for DVI,
- $V_{OUT15} = 5.0$ V with a maximum output current of 0.005 A for DVI,
- $V_{OUT16} = 3.3$ V with a maximum output current of 0.6 A for DCD,
- $V_{OUT17} = 1.8$ V with a maximum output current of 0.9 A for DCD,
- $V_{OUT18} = 3.3$ V with a maximum output current of 0.02 A for DCD,
- $V_{OUT19} = 2.5$ V with a maximum output current of 0.4 A for DCD,
- $V_{OUT20} = 1.25$ V with a maximum output current of 0.002 A for DCD,

Rev. A

Design criteria are for coincidental tracking of V_{OUT17} and V_{OUT19} with V_{OUT16} and near ratiometric tracking of V_{OUT2} with V_{OUT5} to ensure turn on times are nearly the same (V_{OUT5} reaches regulation no more than 500us after V_{OUT2}). Two DDR terminations are designed for ratiometric tracking: V_{OUT4} tracks V_{OUT3} and V_{OUT13} tracks V_{OUT9} . All outputs discharge to 0.1 V in under 100 ms through external pull down resistors switched on when the rails are disabled. The ripple and transient assumptions are 2% peak to peak voltage ripple (for the switchers) and 5% deviation due to 50% instantaneous load step respectively. The nominal switching frequency is fixed at 300 kHz for V_{OUT1} , V_{OUT2} , V_{OUT3} , V_{OUT4} , V_{OUT12} and V_{OUT13} . V_{OUT7} , V_{OUT8} , V_{OUT9} , V_{OUT14} , V_{OUT16} and V_{OUT17} switch at a fixed nominal frequency of 1.2 MHz. V_{OUT10} switches at a pseudo fixed frequency of 3 MHz (frequency varies slightly with load). All other outputs are filtered, or linear regulated out of the switching rails.

REVISION HISTORY

9/5/2007—Revision 0: Initial Version

GENERAL DESCRIPTION

ADP1823

The ADP1829 is a versatile, dual output, interleaved, synchronous PWM buck controller that generates two independent outputs from an input voltage of 2.9 V to 20 V. Each channel can be configured to provide output voltage from 0.6V to 85% of the input voltage. The two channels operate 180° out of phase, which reduces the current stress on the input capacitor and allows the use of a smaller and lower cost input capacitor.

The ADP1829 operates at a pin-selectable fixed switching frequency of either 300 kHz or 600 kHz. For some noise sensitive applications, it can also be synchronized to an external clock to achieve switching frequency between 300 kHz and 1 MHz. The switching frequency chosen is 300 kHz to get good efficiency over a wide range of input and output conditions.

The ADP1829 includes an adjustable soft start to limit input inrush current, voltage tracking for sequencing or DDR termination, independent power-good output, and a power enable pin. It also provides current-limit and short-circuit protection by sensing the voltage on the synchronous MOSFET.

ADP2105, ADP2106, ADP2107

The ADP2105,6,7 are a versatile, single output, synchronous PWM buck controller with integrated synchronous FETs that generates a single output from an input voltage of 2.7 V to 5.5 V. The controller can be configured to provide output voltage from 0.8 V to the input voltage with an output current up to 2 A.

The ADP2105,6,7 operate at a fixed switching frequency of 1.2 MHz to reduce component size.

The ADP2105,6,7 include an adjustable soft start to limit input inrush current. Inherent to their current mode design they provide current-limit and short-circuit protection by sensing the voltage dropped across the internal MOSFET.

ADP171X

The ADP171X is a family of low drop out CMOS linear regulators that provides versatile and inexpensive step-down voltage regulation. The input voltage range is 2.5 V to 5.5 V and the output current capability is up to 500 mA. The various versions provide features such as Enable, Soft Start, Low Noise Bypass and Tracking. They are available in space saving TSOT-5 and MSOP-8 packages and operate over the -40°C to +125°C temperature range.

ADP2102

The ADP2102 is a low quiescent current, step-down dc-to-dc converter in a compact 3 mm × 3 mm LFCSP package. The ADP2102 uses a current-mode, constant on-time, valley current control scheme for excellent stability and transient response with only three external components. To ensure the longest battery life in portable applications, the ADP2102 has a power-saving mode (PSM) that reduces the switching frequency under light load conditions to significantly reduce quiescent current.

The ADP2102 runs on input voltages from 2.7 V to 5.5 V and operate over the -40°C to +85°C temperature range.

ADP1581

The ADR1581 is a low cost, 2-terminal (shunt), precision band gap reference. It provides an accurate 1.250 V output for input currents between 60 µA and 10 mA.

The ADR1581 is available in two grades, A and B, both of which are provided in the SOT-23 package. Both grades are specified over the industrial temperature range of -40°C to +85°C.
