

60V Zero Drift

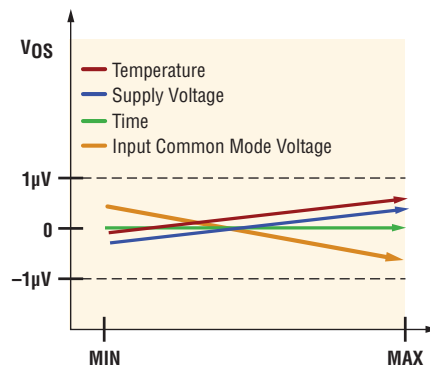

Zero Drift • 200nV_{P-P} Noise • 30pA I_{BIAS}

The LTC[®]2057HV delivers rock-solid, zero-drift performance for systems requiring the highest levels of precision over time, temperature, input common mode voltage and power supply range. Operating on a 4.75V to 60V supply, the LTC2057HV features many improvements over prior zero drift amplifiers, including a high 100kHz chopping frequency with low spurs, low wideband noise and 30mA short-circuit output current.

▼ HV Signal Conditioning

Part Number	Description
LTC2057	60V Zero-Drift Op Amp
LTC6102	105V High-Side Current Sense Amp
LTC6090	140V Precision Op Amp
LTC6016	76V Over-The-Top [®] Op Amp
LT [®] 5400	±80V Quad Precision Matched Resistors
LT1990	±250V Difference Amplifier

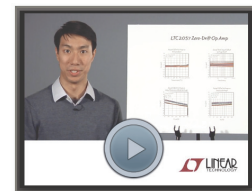

Zero Drift
