

LTM4650AEY

Dual 25A or Single 50A DC/DC μ Module Regulator

DESCRIPTION

Demonstration circuit 2603A-A features the LTM[®]4650AEY-1, the high efficiency, high density, dual 25A, single 50A switch mode step-down power module regulator. The input voltage is from 4.5V to 16V. The output voltage is programmable from 0.6V to 5.5V. DC2603A-A can deliver 25A maximum current from each channel. The board designs with minimum components to demonstrate this high efficiency, high density μ Module[®]. As explained in the data sheet, output current derating is necessary for certain V_{IN} , V_{OUT} , and thermal conditions. The board operates in continuous conduction mode in heavy load conditions. For high efficiency at low load currents, the MODE jumper (JP1) selects pulse-skipping mode for noise sensitive applications or Burst Mode[®] operation in less noise sensitive applications. Two outputs can be connected in parallel for a single 50A out-

put solution with optional jumper resistors. The board allows the user to program how its output ramps up and down through the TRACK/SS pin. The output can be set up to either coincidentally or ratiometrically track with another supply's output. Remote output voltage sensing is available for improved output voltage regulation at the load point. These features and the availability of the LTM4650AEY in a compact 16mm \times 16mm \times 5.01mm BGA package make it ideal for use in many high-density point-of-load applications. The LTM4650A data sheet must be read in conjunction with this demo manual for working on or modifying the demo circuit DC2603A-A.

Design files for this circuit board are available at

DEMO MANUAL DC2603A-A

PERFORMANCE SUMMARY

Specifications are at $T_A = 25^\circ\text{C}$

PARAMETER	CONDITIONS	VALUE
Input Voltage Range		4.5V ~ 16V
Output Voltage V_{OUT1}	$V_{IN} = 4.5\sim 16\text{V}$, $I_{OUT1} = 0\sim 25\text{A}$, JP1: CCM	$1.5\text{V} \pm 1\%$ (1.485V ~ 1.515V)
Output Voltage V_{OUT2}	$V_{IN} = 4.5\sim 16\text{V}$, $I_{OUT1} = 0\sim 25\text{A}$, JP1: CCM	$3.3\text{V} \pm 1\%$ (3.267V ~ 3.333V)
Per- Channel Maximum Continuous Output Current	De-rating is Necessary for Certain V_{IN} , V_{OUT} and Thermal Conditions, see Data Sheet for Detail	25A
Default Operating Frequency		600kHz
Resistor Programmable Frequency Range		250kHz to 780kHz
External Clock Sync. Frequency Range		400kHz to 780kHz
Efficiency of Channel 1	$V_{IN} = 12\text{V}$, $V_{OUT} = 1.5\text{V}$, $I_{OUT} = 25\text{A}$, $f_{SW} = 600\text{kHz}$	90.4%, See Figure 3
Efficiency of Channel 2	$V_{IN} = 12\text{V}$, $V_{OUT} = 3.3\text{V}$, $I_{OUT} = 25\text{A}$, $f_{SW} = 600\text{kHz}$	94.2%, See Figure 4
Load Transient of Channel 1	$V_{IN} = 12\text{V}$, $V_{OUT} = 1.5\text{V}$, $I_{STEP} = 12.5\sim 18.75\text{A}$	$< \pm 3\%$ (90mV _{p-p}), See Figure 5
Load Transient of Channel 2	$V_{IN} = 12\text{V}$, $V_{OUT} = 3.3\text{V}$, $I_{STEP} = 12.5\sim 18.75\text{A}$	$< \pm 3\%$ (198mV _{p-p}), See Figure 6

QUICK START PROCEDURE

Demonstration circuit DC2603A-A is easy to set up to evaluate the performance of the LTM4650AEY. Please refer to Figure 2 for proper measurement setup and follow the procedure below:

1. Place jumpers in the following positions for a typical application:

JP1	JP2	JP3	JP4	JP5
MODE	RUN1	RUN2	TRACK1 SEL	TRACK2 SEL
CCM	ON	ON	SOFT-START	SOFT-START

2. With power off, connect the input power supply, load and meters as shown in Figure 2. Preset the load to 0A and V_{IN} supply to 12V.
3. Turn on the power supply at the input. The output voltage in channel 1 should be $1.5\text{V} \pm 1.0\%$ (0.985V~1.015V) and the output voltage in channel 2 should be $3.3\text{V} \pm 1.0\%$ (3.267V~3.333V)
4. Once the proper output voltage is established, adjust the load within the operating range and observe the output voltage regulation, output voltage ripple, efficiency and other parameters. Output ripple can be measured at J1 and J2 with BNC cables. 50 Ω termination should be set on the oscilloscope or BNC cables.

5. (Optional) For optional load transient test, apply an adjustable pulse signal between "IOSTEP CLK" and "GND" test point. Pulse amplitude (3V~3.5V) sets the load step current amplitude. The output transient current can be monitored at the BNC connector J3 (10mV/A). The pulse signal should have very small duty cycle ($< 10\%$) to limit the thermal stress on the transient load circuit. Switch the jumper resistors R34 or R35 (on the backside of boards) to apply load transient on channel 1 or channel 2 correspondingly.
6. (Optional) LTM4650A can be synchronized to an external clock signal. Place the JP1 jumper on EXT_CLK and apply a clock signal (0V~5V, square wave) on the CLKIN test point.
7. (Optional) The outputs of LTM4650A-1 can track another supply. The jumpers JP4 and JP5 allow choosing soft-start or output tracking. If tracking external voltage is selected, the corresponding test points, TRACK1 and TRACK2, need to be connected to a valid voltage signal.
8. (Optional) LTM4650A-1 can be configured for a 2-phase single output at up to 50A on DC2603A-A. Install 0 Ω resistors on R14, R17, R28, R39, R43, R44, R45 and remove R7, R19. Output voltage is set by R25 based on equation:

$$V_{OUT} = 0.6\text{V} \cdot \left(1 + \frac{60.4\text{k}}{R25} \right)$$

DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

Please read the DEMO BOARD manual prior to handling the product. Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
