

Micropower Operational Amplifier Single or Dual Supply

OP-20

FEATURES

- **Low Supply Current** 55µA Max
- **Single-Supply Operation** +5V to +30V
- **Dual-Supply Operation** ±2.5V to ±15V
- **Low Input Offset Voltage** 250µV Max
- **Low Input Offset Voltage Drift** 1.5µV/°C Max
- **High Common-Mode Input Range** ... V- to V+ (-1.5V)
- **High CMRR and PSRR** 100dB Min
- **High Open-Loop Gain** 120dB Min
- **No External Components Required**
- **741 Pinout and Nulling**
- **Available in Die Form**

GENERAL DESCRIPTION

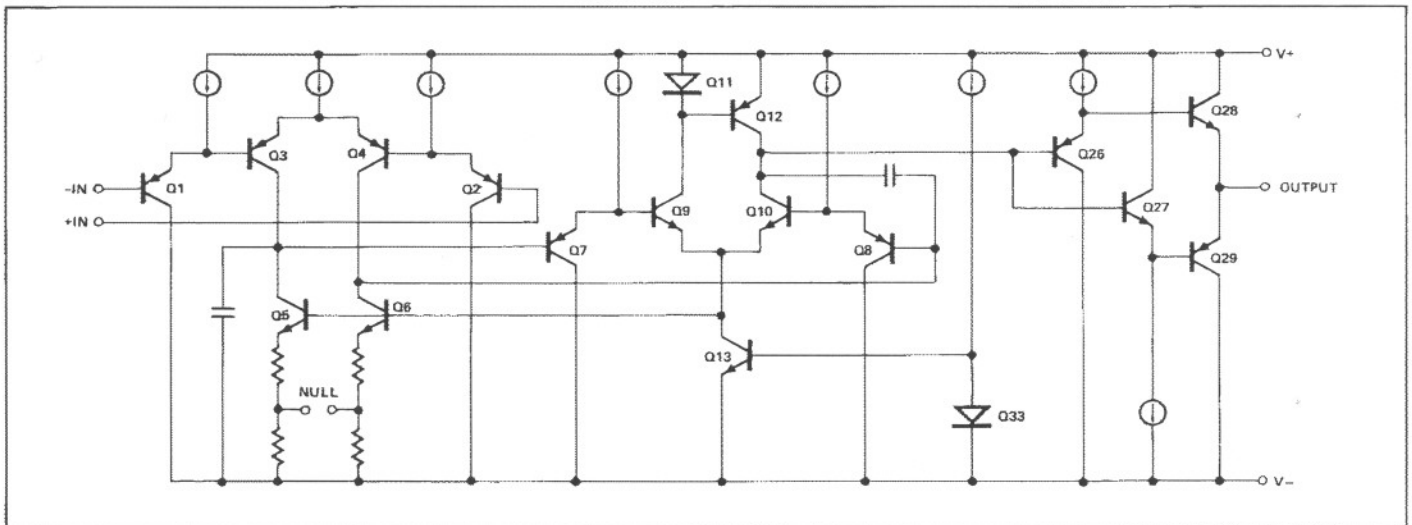

The OP-20 is a monolithic micropower operational amplifier that can be operated from a single power supply of +5V to +30V, or from dual supplies of ±2.5V to ±15V. The input voltage range extends to the negative rail, therefore input signals down to zero volts can be accommodated when operating from a single supply.

Precision performance in high-gain applications is readily obtained when using the OP-20. The B/F grade features a maximum input offset voltage of 250µV, minimum CMRR of 95dB, and open-loop gain of over 500,000. Quiescent supply current is a maximum of only 55µA at ±2.5V or 80µA at ±15V. The low input offset, high gain, and low power consumption brings precision performance to portable instruments, satellites, missile control systems, and many other battery-powered applications.

NOTE: Electrical tests are performed at wafer probe to the limits shown. Due to variations in assembly methods and normal yield loss, yield after packaging is not guaranteed for standard product dice. Consult factory to negotiate specifications based on dice lot qualification through sample lot assembly and testing.
