### NAT9914

Pin compatible with TI TMS9914A Software compatible with NEC µPD7210 or TI TMS9914A controller chips Low power consumption Meets all IEEE 488.2 requirements Bus line monitoring Preferred implementation of requesting service Will not send messages when there are no Listeners Performs all IEEE 488.1 interface functions Programmable data transfer rate (T1 delays of 350 ns, 500 ns, 1.1 µs, and 2 µs) Automatic EOS and/or NL message detection Direct memory access (DMA) Automatically processes IEEE 488 commands and reads undefined commands

TTL-compatible CMOS device Programmable clock rate 20 MHz maximum Reduces driver overhead Does not lose a data byte if ATN is asserted while transmitting data

## Description

The NAT9914 IEEE 488.2 controller chip can perform all the interface functions defined by the IEEE Standard 488.1-1987, and also meets the additional requirements and recommendations of the IEEE Standard 488.2-1987. Connected between the processor and the IEEE 488 bus, the NAT9914 provides highlevel management of the IEEE 488 bus, significantly increases the throughput of driver software, and simplifies both the hardware and software design. The NAT9914 performs complete IEEE 488 Talker, Listener, and Controller functions. In addition to its numerous improvements, the NAT9914 is also completely pin compatible with the TI TMS 9914A and software compatible with the NEC µPD7210 and TI TMS9914A controller chips.

### IEEE 488.2 Overview

The IEEE 488.2 standard removes the ambiguities of IEEE 488.1 by standardizing the way instruments and controllers operate. It defines data formats, status reporting, error handling, and common configuration commands to which all IEEE 488.2 instruments must respond in a precise manner. It also defines a set of controller requirements. With IEEE 488.2, you gain the benefits of reduced development time and cost because systems are more compatible and reliable. The NAT9914 brings the full power of IEEE 488.2 to the design engineer along with numerous other design and performance benefits, while retaining the 40-pin and 44-pin hardware configurations of the TI TMS 9914A.

## **NATIONAL INSTRUMENTS**

## General

The NAT9914 manages the IEEE 488 bus. You program the IEEE 488 bus by writing control words into the appropriate registers. CPU-readable status registers supply operational feedback. The NAT9914 mode determines the function of these registers. On power up or reset, the NAT9914 registers resemble those of the TMS9914A set, with additional registers that supply extra functionality and IEEE 488.2 compatibility. In this mode, the NAT9914 is completely pin compatible with the TI TMS9914A. If you enable the 7210 mode, the registers resemble those of the NEC µPD7210 set, with additional registers that supply extra functionality and IEEE 488.2 compatibility. This mode is not pin compatible with the NECµPD7210. Figure 4 shows the key components of the NAT9914.

Pin Number					
PLCC	DIP	QFP	Mnemonic	Туре	Description
43	39	4	TR	0'	Trigger asserts when one of the trigger conditions is satisfied.
33	30	38	CONT*	O <sup>†</sup>	Controller asserts when the NAT9914 is Controller-In-Charge.
44	40	5	VDD	-	Power pin – +5 V (±5%)
22	20	27	VSS	-	Ground pin – 0 V
1, 18,	-	1, 6,	NC	-	No connect
28,40		23, 33			

OC= Open collector.

<sup>†</sup> The pin contains an internal pull-up resistor of 25 k $\Omega$  to 100 k $\Omega$ .

\* Active low.

" In controller applications where the CLK signal frequency is > 8 MHz, IFC\* should be pulled up with a 4.7 k $\Omega$  resistor.

<sup>III</sup> RS0 and RS1 contain an internal pull-up resistor of 25 kΩ to 100 kΩ. RS2 does not contain an internal pull-up or pull-down resistor.

Figure 4. NAT9914 Block Diagram

### 9914 Mode Registers

In 9914 mode, the NAT9914 registers consist of all the TI TMS9914A registers and two types of additional registers – newly defined registers and paged-in registers. The NAT9914 maps the newly defined registers into the unused portion of the 9914 address space. Each paged-in register appears at Offset 2 immediately after you issue an auxiliary page-in command, and it remains there until you page another register into the same space or you issue a reset. The table below lists all the registers in the 9914 register set. See the NAT9914 Reference Manual available at **ni.com** for more information.

#### 9914 Register Set

Register	PAGE-IN	R	S(2-0	))	WE*	DBIN	CE*	ACCGR*
Interrupt Status 0	U	0	0	0	1	1	0	1
Interrupt Mask 0	U	0	0	0	0	0	0	1
Interrupt Status 1	U	0	0	1	1	1	0	1
Interrupt Mask 1	U	0	0	1	0	0	0	1
Address Status	U	0	1	0	1	1	0	1
Interrupt Mask 2'	Р	0	1	0	0	0	0	1
End-of-String	Р	0	1	0	0	0	0	1
Bus Control	Р	0	1	0	0	0	0	1
Accessory	Р	0	1	0	0	0	0	1
Bus Status	U	0	1	1	1	1	0	1
Auxiliary Command	U	0	1	1	0	0	0	1
Interrupt Status 2'	Р	1	0	0	1	1	0	1
Address	U	1	0	0	0	0	0	1
Serial Poll Status'	Р	1	0	1	1	1	0	1
Serial Poll Mode	U	1	0	1	0	0	0	1
Command Pass Through	U	1	1	0	1	1	0	1
Parallel Poll	U	1	1	0	0	0	0	1
Data-In	U	1	1	1	1	1	0	1
Data-In	U	Х	Х	Х	Х	0	Х	0
Command/Data Out	U	1	1	1	0	0	0	1
Command/Data Out	U	Х	Х	Х	0	1	Х	0

The " symbol denotes features (such as registers and auxiliary commands) that are not available in the TMS9914A.

Notes for the PAGE-IN column:

- U = Page-in auxiliary commands do not affect the register offset.
- P = The register offset is valid only after a page-in auxiliary command.

## 7210 Mode Registers

The NAT9914 registers include all the NEC  $\mu$ PD7210 registers plus two types of additional registers – extra auxiliary registers and paged-in registers. You write the extra auxiliary registers the same as standard  $\mu$ PD7210 auxiliary registers. On issuing an auxiliary page-in command, the paged-in registers appear at the same offsets as existing  $\mu$ PD7210 registers. At the end of the next CPU access, the chip pages out the paged-in registers. The following table lists all the registers in the 7210 mode register set. See the NAT9914 Reference Manual available at **ni.com** for more information.

#### 7210 Register Set

Register	PAGE-IN	l	4(2-0	)	WE*	DBIN	CE*	ACCGR*
Data-In	U	0	0	0	1	1	0	1
Data-In	Х	Х	Х	Х	Х	0	Х	0
Command/Data Out	U	0	0	0	0	0	0	1
Command/Data Out	Х	Х	Х	Х	0	1	Х	0
Interrupt Status 1	U	0	0	1	1	1	0	1
Interrupt Mask 1	U	0	0	1	0	0	0	1
Interrupt Status 2	U	0	1	0	1	1	0	1
Interrupt Mask 2	U	0	1	0	0	0	0	1
Serial Poll Status	N	0	1	1	1	1	0	1
Serial Poll Mode	N	0	1	1	0	0	0	1
Version	Р	0	1	1	1	1	0	1
Internal Counter 2	Р	0	1	1	0	0	0	1
Address Status	U	1	0	0	1	1	0	1
Address Mode	U	1	0	0	0	0	0	1
Command Pass Through	N	1	0	1	1	1	0	1
Auxiliary Mode	U	1	0	1	0	0	0	1
Source/Acceptor Statust	Р	1	0	1	1	1	0	1
Address 0	Ν	1	1	0	1	1	0	1
Address	N	1	1	0	0	0	0	1
Interrupt Status 0 <sup>t</sup>	Р	1	1	0	1	1	0	1
Interrupt Mask 0 <sup>+</sup>	Р	1	1	0	0	0	0	1
Address 1	N	1	1	1	1	1	0	1
End-of-String	N	1	1	1	0	0	0	1
Bus Status'	Р	1	1	1	1	1	0	1
Bus Control	Р	1	1	1	0	0	0	1

The " symbol denotes features (such as registers and auxiliary commands) that are not available in the NEC7210.

Notes for the PAGE-IN column:

- U = The page-in auxiliary command does not affect the register.
- N = The register offset is always valid except for immediately after a page-in auxiliary command.
- P = The register is valid only immediately after a page-in auxiliary command.

### **Preliminary DC Characteristics**

 $T_A 0$  to 70 °C;  $V_{CC} = 5 V \pm 5\%$ 

		Limits			Test
Parameter	Symbol	Min	Max	Unit	Condition
Voltage input low	VIL	-0.5	+0.8	V	-
Voltage input high	V <sub>IH</sub>	+2.0	V <sub>CC</sub>	V	-
Voltage output low	V <sub>OL</sub>	0	0.4	V	-
Voltage output high	V <sub>OH</sub>	+2.4	VCC	V	-
Input/output	-	-10	+10	μA	without
Leakage current					internal pull-up
Input/output	-	-200	+200	μA	with internal
Leakage current					pull-up
Supply current	-	-	45	mA	-
Output current low					
All pins except ACCRQ	I <sub>OL</sub>	2	-	mA	0.4 V @ I <sub>OL</sub>
ACCRQ	I <sub>OL</sub>	4	-	mA	0.4 V @ I <sub>OL</sub>
Input current low	I <sub>IL</sub>	-	- 0.5	mA	-
Supply voltage	V <sub>DD</sub>	4.75	5.25	V	-

#### Capacitance

T<sub>A</sub> 0 to 70 °C; V<sub>CC</sub> = 5 V ±5%

		Limits			Test
Parameter	Symbol	Min	Max	Unit	Condition
Input capacitance	C <sub>IN</sub>	-	10	pF	-
Output capacitance	C <sub>OUT</sub>	-	10	pF	-
I/O capacitance	C <sub>I/O</sub>	-	10	pF	-

#### **Absolute Maximum Ratings**

Property Range						
Supply voltage, V <sub>DD</sub> -0.5 to +7.0 V						
Input voltage, V <sub>1</sub> -0.5 to V <sub>DD</sub> +0.5 V						
Operating temperature, T <sub>OPR</sub> 0 to +70° C						
Storage temperature, T <sub>STG</sub> -40 to +125° C						
Comment: Exposing the device to stresses above those listed could cause permanent damage. The						
device is not meant to be operated under conditions outside the limits described in the operational						
section. Exposure to absolute maximum ratin	ng conditions for extended periods may affect reliability.					

#### **AC Characteristics**

T<sub>A</sub> 0 to 70 °C; V<sub>CC</sub> = 5 V ±5%

		Lin	nits		Test
Parameter	Symbol	Min	Max	Unit	Condition
Address hold from CE, WE, and DBIN	t <sub>AH</sub>	0	-	ns	-
Address setup to $\overline{\text{CE}}$ , $\overline{\text{WE}}$ , and DBIN	t <sub>AS</sub>	0	-	ns	-
Data float from CE or DBIN	t <sub>DF</sub>	-	20	ns	-
Data delay from DBIN $\downarrow$	t <sub>DR</sub>	-	75	ns	ACCGR=0
ACCRQ unassertion	t <sub>DU</sub>	-	20	ns	-
Data delay from $\overline{\text{CE}}\downarrow$	t <sub>RD</sub>	-	80	ns	ACCGR=1
CE recovery width	t <sub>RR</sub>	80	-	ns	-
CE pulse width	t <sub>RW</sub>	80	-	ns	-
Data hold from WE↑	t <sub>WH</sub>	0	-	ns	-
Data setup to WE↑	t <sub>WS</sub>	60	-	ns	-

#### Notes:

• tas is the setup time to  $\overline{CE}\downarrow$  or  $\overline{WE}\downarrow$ , whichever is later.

•  $t_{AH}$  is the hold time from  $\overline{WE}\uparrow$  or  $\overline{CE}\uparrow$  , whichever is earlier.

## **Timing Waveforms**

### **Technical Support**

National Instruments strives to provide you with quality technical assistance worldwide. We currently offer electronic technical support along with our technical support centers staffed by applications engineers.

Access information from our Web site at **ni.com** Our FTP site is dedicated to 24-hour support, with a collection of files and documents to answer your questions. Log on to our Internet host at **ftp.ni.com**  You can fax questions to our applications engineers anytime at (800) 328-2203 or (512) 683-5678. Or, you can call from 8:00 a.m. to 6:00 p.m. (central time) at (512) 795-8248. Internationally, contact your local office. National Instruments sponsors a wide variety of group activities, such as user group meetings at trade shows and at large industrial sites. Our users also receive our quarterly newsletters Instrumentation Newsletter<sup>®</sup> and AutomationView<sup>®</sup> to get the latest information on new products, product updates, application tips, and current events. In addition, sign up for NI News, our electronic news service at **ni.com/news** 

### Warranty

All National Instruments data acquisition, computer-based instrument, VXIbus, and MXI<sup>-</sup>bus products are covered by a oneyear warranty. GPIB hardware products are covered by a two-year warranty from the date of shipment. The warranty covers board failures, components, cables, connectors, and switches, but does not cover faults caused by misuse. The owner may return a failed assembly to National Instruments for repair during the warranty period. Extended warranties are available at an additional charge.

Information furnished by National Instruments is believed to be accurate and reliable. National Instruments reserves the right to change product specifications without notice.

### Seminars/Training

Free and fee-paid seminars are presented several times a year in cities around the world. Comprehensive, fee-paid training courses are available at National Instruments offices or at customer sites. Call for training schedules.
