Errata

Title & Document Type: 8620A Sweep Oscillator Service Note

Manual Part Number: 8620A-6B

Revision Date: May 1975

About this Manual

We've added this manual to the Agilent website in an effort to help you support your product. This manual provides the best information we could find. It may be incomplete or contain dated information, and the scan quality may not be ideal. If we find a better copy in the future, we will add it to the Agilent website.

HP References in this Manual

This manual may contain references to HP or Hewlett-Packard. Please note that Hewlett-Packard's former test and measurement, life sciences, and chemical analysis businesses are now part of Agilent Technologies. The HP XXXX referred to in this document is now the Agilent XXXX. For example, model number HP8648A is now model number Agilent 8648A. We have made no changes to this manual copy.

Support for Your Product

Agilent no longer sells or supports this product. You will find any other available product information on the Agilent Test & Measurement website:

www.agilent.com

Search for the model number of this product, and the resulting product page will guide you to any available information. Our service centers may be able to perform calibration if no repair parts are needed, but no other support from Agilent is available.

SERVICE NOTE

Supersedes:

8620A-6A

April'1975

HP MODEL 8620A SWEEP OSCILLATOR Serial Prefix 1332A and Below

MODIFICATION REQUIRED FOR COMPATIBILITY WITH 86290A, 2.0-18.0 GHz RF PLUG-IN OR 8410B NETWORK ANALYZER

All 8620A Sweep Oscillator mainframes serial prefix 1332A and below must be modified to be compatible with the 86290A 2.0 to 18.0 GHz Plug-In, or the 8410B Network Analyzer.

This modification replaces the A1 Sweep Oscillator board assembly with HP Part Number 08620-60095. The new A1 assembly has a Sweep inhibit function (1) that is required by the 86290A in the sequential sweep mode, and (2) that is required by the 8410B in Automatic Frequency Range Select mode when operated over multi-octave bandwidths. If an 86290A is installed in an unmodified 8620A, the 2.0 to 18.0 GHz annunciator light will blink when band 4 Sequential Sweep is selected. When an unmodified 8620A is used with an 8410B, the 8410B will not phase lock in Automatic Frequency Range Select mode when sweeping multi-octave bandwidth.

V	A transfer of the second of th	
862	DA Serial Prefix	Modification Required
8620A	1135A and below	I, II and III
8620A		II and III
8620A	1332A and below	III

Additional modification to the 8620A may be necessary, depending on the serial prefix. The table above should be used to determine which modifications are required. The RF Plug-ins used in the 8620A may also require modification. Table 1 should be used to determine the modifications required.

For more information, call your local HP Sales Office or East (201) 265-5000 • Midwest (312) 677-0400 • South (404) 436-6181 • West (213) 877-1281; Or, write: Hewlett-Packard, 1501 Page Mill Road, Palo Alto, California 9/304. In Europe, Post Office Box 85, CH-1217 Meyrin 2, Geneve, Switzerland, In Japan, Yokogawa-Hewlett-Packard, 1-59-1, Yoyogi, Shibuya-Ku, Tokyo, 151.

A Modification Kit, HP Part Number 08620-60099, contains all the parts and instructions necessary for these modifications. The kit is available through your nearest HP Sales Office.

Modification I for 8620A Serial Prefix 1135 and Below

This modification changes the wiring on the rearpanel assembly to be compatible with the 08620-60095 A1 Sweep Board supplied with this Modification Kit. After this modification the function of J2 Pin 18 (the Programming Connector) is Negative Blanking Out instead of Pen Lift Closed During Retrace.

The Pen Lift Open During Retrace signal will be available at both J5 Z Axis connector and Pin 17

of J2, the Programming Connector.

Procedure for Modification 1:

- 1. Disconnect 8620A from the power line
- 2. Remove top cover.
- 3. Cut the white/red/yellow (924) wire from the Programming Connector J2 Pin 16. Refer to Figure 1.
- 4: Connect the (924) wire just cut to the ground at Pin 6 of S10.

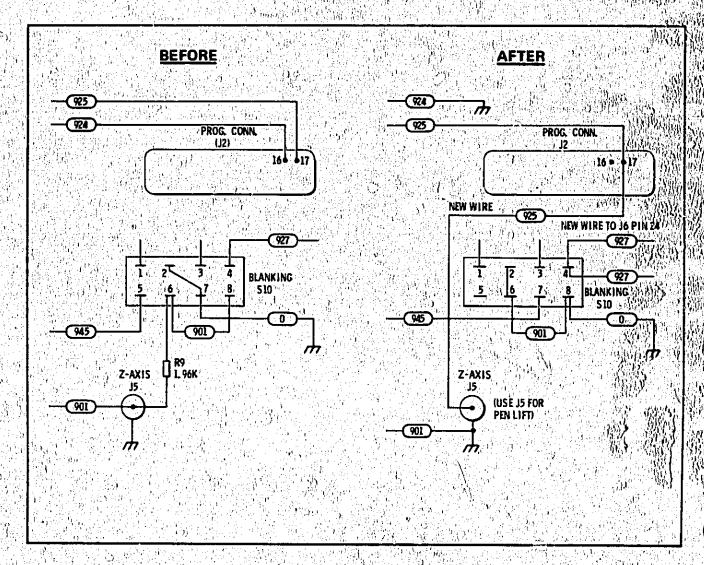

Figure 1. Blanking Switch Wiring Diagram Before And After Modification

- 5. Remove the white/black/brown (901) wire and R9 1960 ohm resistor from the center conductor of the Z Axis output connector J5.
- 6. Connect the (901) just removed to the ground, Pin 6 of S10.
- 7. Modify the wiring to the Blanking Switch S10 on the rear panel as follows: (S10 is the three position slide switch located nearest the fan.) Refer to Figure 1 for S10 Pin location.
 - A Move the white/yellow/green (945) wire from Pin 5 to Pin 7.
 - B. Move the black (0) wire from Pin 2 to Pin 8.
 - C. Remove R9, the 1960 ohm resistor, from Pin 6.
 - D. Install a short bare wire jumper from Pin 2 to Pin 6. The end of the resistor just removed can be used.
- 8. Connect one end of the white/red/green (925) wire from the Modification Kit to the programming connector J2, Pin 17.
- 9. Connect the other end of the (925) wire to the center conductor of the Z Axis output J5.
- 10. Connect one end of the white/red/violet (927) wire from the Modification Kit to the RF Section's interface connector J8, Pin 24. To gain access to J6 remove the mounting screws from the rear panel.
- 11. This wire should be routed with the main wiring harness to the Blanking Switch S1C.
- 12. Connect the other end of the (927) wire to Pin 4 of \$10.
- 13. Correct your Operating and Service Manual.

 Note that negative blanking is now available at the Programming Connector J2, Pin 18.

 Also after this modification, it is necessary to use 08620-60095 A1 Sweep Board.

- 14. Do Modification Number II.
- 15. Do Modification Number III.

Modification II for 8620A Prefix 1306A and Below

This modification adds two jumpers to the A11 Master Board and removes three unused components from the A7 Operations Control Board Assembly.

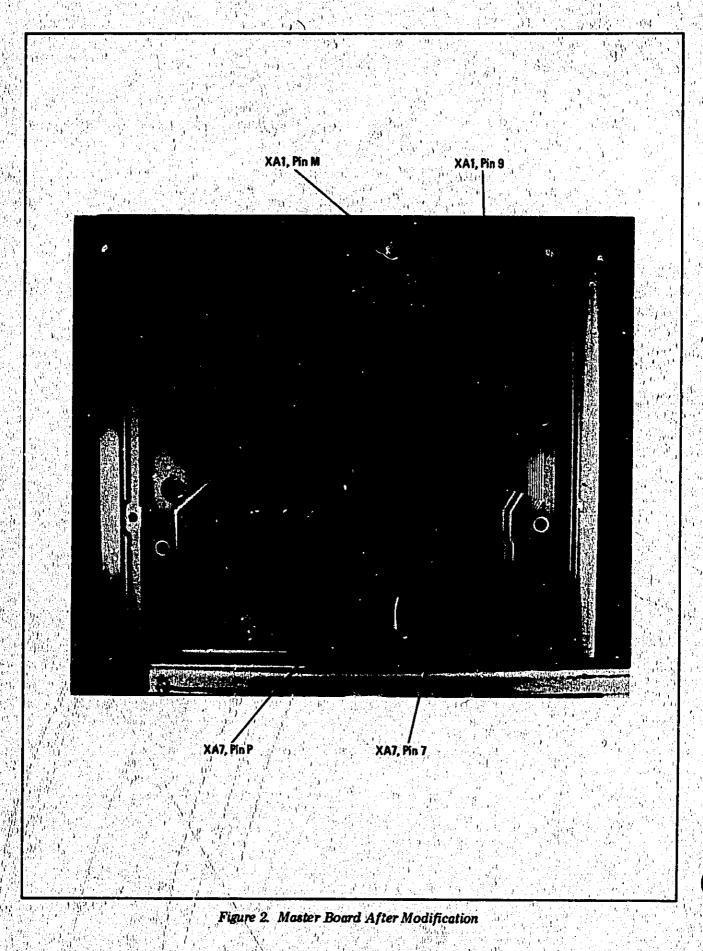

Procedure for Modification II:

- 1. Disconnect 8620A from the power line.
- 2. Remove the bottom cover.
- 3. Install one of the brown wires from the Modification Kit between XA1, Pin 9 and XA7, Pin P. (See Figure 2 for proper mounting.)
- 4. Install the second brown wire between XA1
 Pin M and XA7 Pin 7.
- Replace the bottom cover.
- 6. Remove the top cover.
- 7. Remove the A7 Operations Control Board
 Assembly.
- 8. Remove the following components from the A7 board Q7, R20 and R21. See Figure 3 for component location.
- 9. Do Modification III.

Modification III for 8620A Serial Prefix 1332A and Below

This modification replaces the A1 Sweep Board Assembly. The new Sweep Board (HP Part Number 08620-60095) has a sweep inhibit function.

Model 8629A-

Model 8620A-6A

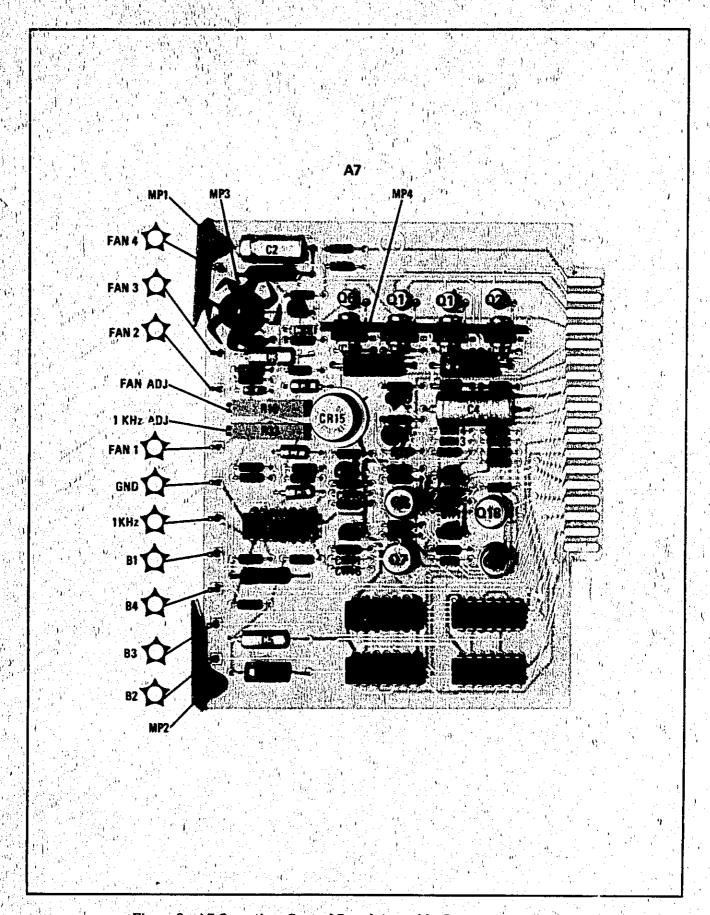

Figure 3. A7 Operations Control Board Assembly Component Locations

Procedure for Modification III:

- 1. Disconnect 8620A from the power line.
- 2. Remove top cover and bottom cover.
- 3. Remove and discard the A1 Sweep Board.
- 4. Before installing the A1 Sweep Board from the Modification Kit, insure that the jumper wires are in the correct position for the particular mainframe being modified. See Figure 4 (Figure 4, A1 Board photo showing jumper placement).

- 5. After installing the A1 Board, it should be adjusted per the adjustment section of this Service Note.
- 6. Solder one end of the white wire 9 from the modification kit to J2 Programming Connector Pin 27.
- 7. Route this wire with the wiring harness and solder to J7 Pin A14.
- 8. Replace the top and bottom cover on the 8620A.
- 9. Correct your Operating and Service Manual by adding the attached schematic, parts list, and adjustment procedure for the 08620-60095 Sweep Board.

MANUAL CHANGES FOR MODIFICATION III

Page 5-3, Table 5-1:

Add the following after A2R11:

Reference	Adjustment	Name on	Function Adjusted
Designation	Paragraph	Board	
A1R9	5-18	SWP	Adjusts sweep time Adjusts sweep return time
A1R8	5-18	RET	
A1R28	5-18	OFFSET	Adjusts symmetry of sweep time to sweep return time
A1R15	5-18	RANGE	Adjusts minimum sweep time at slowest sweep-speed setting of TIME-SECONDS vemier.

Page 5-4, Figure 5-2:

Replace Figure 5-2 with Figure 5-2 in this SERVICE NOTE.

Page 5-5, Figure 5-3:

Replace Figure 5-3 with Figure 5-3 in this SERVICE NOTE.

Page 5-11:

Add the following Adjustment Procedure after Paragraph 5-17:

5-18. SWEEP GENERATOR BOARD ADJUSTMENTS

REFERENCE:

Service Sheet 1, SWEEP GENERATOR ASSEMBLY.

DESCRIPTION

Set correct sweep time, sweep return time, symmetry, and range of the RF Blanking Signal.

EQUIPMENT:

Oscilloscop	e .		 HP	180A/18	301 A/1820 A
10:1 Probe				to the second second	HP 10004B
1:1 Probe.	• •				HP 10008B

NOTE

RF Plug-in should not be installed in 8620A.

PROCEDURE:

- a. Connect oscilloscope VERTICAL input to A1TP9 (10:1 Probe), and ground lead to A1TP12.
- b. Connect oscilloscope EXT TRIGGER input to A1TP9 (1:1 probe), and set oscilloscope trigger controls to "EXT," "NORM," and "(—)" SLCIE.
- c. Press start push button and both start and stop push buttons should light.
- d. Set 8620A sweep functions "MODE" switch to "AUTO."
- e. Set 8620A sweep "TRIGGER" switch to "INT."

- f. Set 8620A sweep "TIME" switch to ".1 .01," and turn sweep time vernier fully clockwise.
- g. Adjust scope for display as shown in Figure 5-4.
- h. Set A1R15 RANGE and A1R28 OFFSET controls to center of range.
- i. Adjust A1R9 SWP control for t₁ = 10.8 msec. Adjust A1R8 RET control for t₂ = 5.4 msec.
- j. Set 8620A TIME-SECONDS vernier fully counterclockwise. Connect a 19.6K 1% resistor between A1TP4 and A1TP12.
- k. Adjust oscilloscope sweep time so t₁ occupies 6.5 divisions of the display. Adjust A1R28 OFFSET control so t₂ occupies 1.0 division of the display. Symmetry is now 6.5:1.
- 1. Remove 19.6K resistor. With oscilloscope sweep time in a calibrated mode, adjust A1R15 RANGE control for t₁ = 282 msec.
- m. Connect 19.6K resistor between A1TP4 and A1TP12. Verify symmetry between 6.5:0.7 and 6.5:1.3.
- n. Set 8620A time-seconds verneir fully clockwise. t₁ should be between 32.5ms and 37.5ms (19.6K resistor still connected); if not, selected a new value between 51.5K and 110K for A1R2.
