## Keysight Technologies Model Builder Program Technical Overview

Complete Silicon Turnkey Device Modeling Platform

# 

## Introduction

Model Builder Program (MBP) is a complete modeling solution that integrates device simulation, model parameter extraction and optimization. MBP supports all popular compact models including the latest BSIM-CMG, BSIM-IMG, and BSIM6 for DC, AC and RF applications. MBP also supports the macro (subcircuit) model and Verilog-A model.

MBP provides automatic extraction. The open interface enables optimization flow customization, device target definition and the ability to define GUI operations. With its superior optimization technology and advanced features, MBP provides the most comprehensive, accurate and efficient modeling solutions, especially for silicon devices.

### Key Features

- Fully automated BSIM3, BSIM4, BSIMSOI, PSP, HiSIM2, HiSIM\_HV, GP, VBIC, and MEXTRAM model extraction and optimization flows
- Support for the latest BSIM6 versions and advanced MGFET models (BSIM-CMG and BSIM-IMG)
- Open interface enables users to customize modeling flows and internal functions using scripting
- Built-in macro model optimization capabilities incorporating HV and layout effect modeling
- The industry's most complete variation modeling solution with both the BPV and PCA based variation model automated extraction flows
- Reliability package to support industrial MOSRA and TMI aging models
- Equipped with superior optimization technology balancing speed and accuracy
- Excellent usability with a friendly user interface, efficient model file management and model library support
- Integrated modeling data flow across Keysight Technologies's device modeling platform

## **MBP Specifications**

OS and Simulators	Models		Supported Operations
Windows and Linux HSPICE and Spectre	MOSFET	BSIM3 BSIM4 BSIM6 PSP HiSIM2 HiSIM_HV	<ul> <li>Automatic model extraction and optimization</li> <li>Macro model optimization</li> <li>Intermediate Variables such as (Vth vs. L, Idsat vs. T, etc) optimization</li> <li>Model extraction based on Design Spec (No IV/CV is needed)</li> <li>Model library import, optimization and export</li> <li>Both internal and external simulators available</li> <li>Model tweaking for both global and binning model</li> <li>Model file management and conversion between</li> </ul>
	SOI	BSIMSOI3 BSIMSOI4	
	MGFET	BSIM-CMG BSIM-IMG	
	ВЈТ	GP (Gummel Poon) VBIC MEXTRAM HiCUM	<ul><li>simulator formats</li><li>Scripting capability</li></ul>
	Diode (level 1,3) and Juncap2		
	Resistor (R2 and R3)		
	Inductor		
	MOSVAR and MIM cap	pacitor	
	JFET		
	Sub-circuit modeling	High voltage Layout effect RF model	
	Monte-Carlo model	Process variation Mismatch	

#### Optimizer

- Superior optimization technology balancing speed and accuracy
- Internal optimizer supports the optimization of general models, subcircuit models, Design Spec, and Intermediate variables

## Macro Modeling

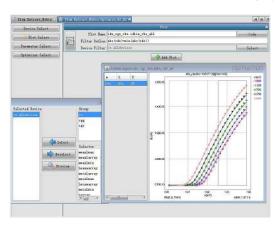

- MBP provides the fastest optimization speed for macro modeling
- Equipped with predefined templates for high voltage device modeling and layout effect modeling such as STI and WPE
- Enables optimization of macro variables and model parameters together at fast speed
- Supports all popular simulator formats

#### Task Tree

- Automatic extraction and optimization steps are implemented for all industry standard models
- Customize the extraction and optimization flow using simple Java programming

### GUI-based Custom Model Extraction Environment

- Fully interactive GUI to adjust an automated model extraction flow
- No coding or compilation is required
- Extraction step adjustment supported for data/region selection, model parameters, graphs and optimizer settings

#### IMV and DP

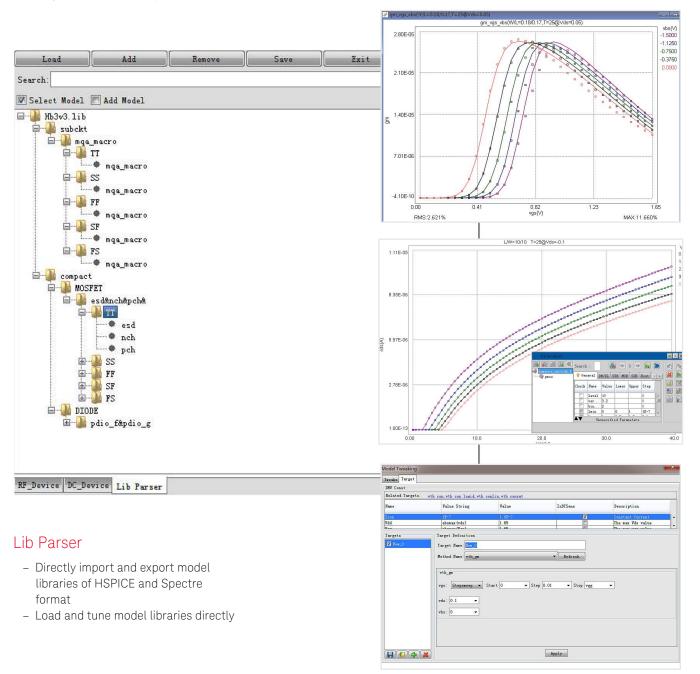

- MBP enables users to optimize on Vth, Idsat, Ioff or any device targets of user defined vs. W/L/T. For example, NLX, DVTO, and DVT1 can be optimized directly on Vth vs. L curve at different Vbs
- MBP enables loading Device
   Parameter data and using it as a target to tweak model parameters

#### Model Tweaking

- The smart model tweaking module enables easy model retargeting according to new specifications
- Supports both the model card and model library
- Supports tweaking binning model library without damaging the continuity

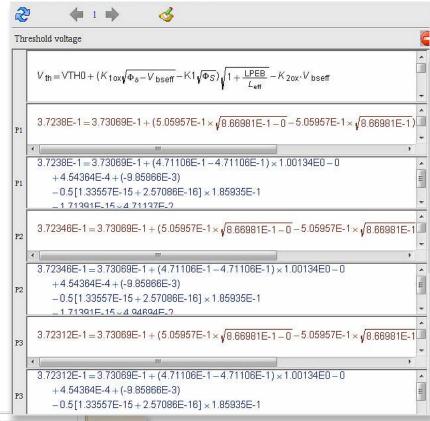

#### MBP Script

 MBP script enables GUI operation application, plot manipulation, data re-organization, IMV target definition, and extraction flow customization

#### **Best Usability**

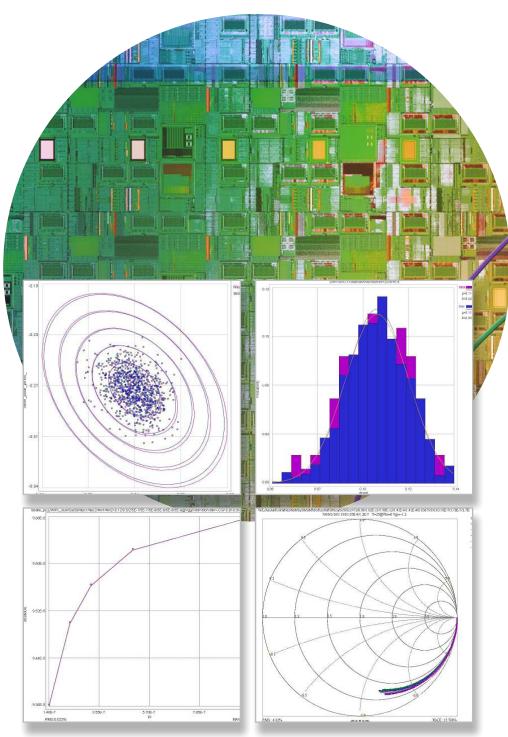

- Flexible and simple device navigation
- Equation viewer enables easy debugging of model issues on the fly
- Easy parameter selection and optimization
- Model comparison function enables in-progress model comparison during model extraction process
- Error monitor provides global view of fitting error.
- Data checking module guarantees data integrity
- MBP's internal functions can be customized, such as math transforms and RMS definitions through the open interface

# Comprehensive Modeling Package

- Monte-Carlo model support for global variation and local mismatch models
- Complete PCA-based variation model extraction flow to support N/P correlation
- RF module enables accurate modeling of devices for RF applications
- State-of-the-art subcircuit modeling approach for high voltage device modeling
- Stress (layout dependent effects) module enables parallel simulation
- Circuit-based model extraction base on the figure of merits of benchmark circuit (ex. RO stage delay, dynamic power, leakage power)

## **Product Structure**

**Model Builder Program (MBP)** is a one-stop solution that provides both automation and flexibility for silicon device modeling.

**Core Environment** includes all the necessary components for data loading, model simulation, parameter extraction, model generation and reporting.

Simulation can be performed by either the internal engine or external simulators (e.g. HSPICE, Spectre). The extraction packages for BSIM3, BSIM4, GP bipolar, resistor, capacitor, diode, JFET and macro model are included by default.

 W8601EP/ET Model Builder Program Core Environment

Models	Description	Modules
CMOS Modeling	General extraction package for the BSIMSOI, PSP, HiSIM2, HiSIM_HV, BSIM6, BSIM-CMG, BSIM-IMG, and Level 66 HVMOS models.	W8602EP/ET MBP BSIMSOI Model Generation Software W8603EP/ET MBP PSP Model Generation Software W8604EP/ET MBP HiSIM2 Model Generation Software W8605EP/ET MBP HiSIM_HV Model Generation Software W8615EP/ET MBP BSIM6 Model Generation Software W8616EP/ET MBP BSIM-CMG Model Generation Software W8617EP/ET MBP BSIM-IMG Model Generation Software W8618EP/ET MBP MOS66 Model Generation Software
BJT Modeling	General extraction package for the VBIC, HICUM, and MEXTRAM bipolar models.	W8606EP/ET MBP VBIC Model Generation Software W8607EP/ET MBP HICUM Model Generation Software W8609EP/ET MBP MEXTRAM Module Generation Software
CMOS and BJT Modeling	General extraction package for the popular CMOS (PSP, BSIMSOI, HISIM2, and HISIM_HV) and BJT (VBIC, HICUM, and MEXTRAM) models.	W8624EP/ET MBP Silicon Model Extraction Package
Stress Modeling	Complete flow for layout-dependent stress effect model generation and optimization.	W8611EP/ET MBP Stress Model Extraction Software
RF Modeling	RF parameter extraction packages for MOSFETs, BJTs, capacitors, diodes, inductors and resistors	W8612EP/ET MBP RF Model Extraction Software
Verilog-A Model Support	Support for Verilog-A model loading and tweaking	W8613EP/ET MBP Verilog-A Model Support Software
Reliability Modeling	Extraction packages for MOS Reliability Analysis (MOSRA) and TSMC Model Interface (TMI) aging model generation	W8614EP/ET MBP Reliability Module MOSRA - TMI Software
Statistical Modeling	Statistical and mismatch model extraction packages for MOSFETs, BJTs, resistors and capacitors.	W8620EP/ET MBP Statistical Model Generation Software
Viewer Module	A graphical user interface (GUI) that enables you to view model simulation results and generate reports.	W8619EP/ET MBP Viewer Software
