# **DIAGRAMS AND CIRCUIT BOARD ILLUSTRATIONS**

#### Symbols

Graphic symbols and class designation letters are based on ANSI Standard Y32.2-1975.

Logic symbology is based on ANSI Y32.14-1973 in terms of positive logic. Logic symbols depict the logic function performed and may differ from the manufacturer's data.

The overline on a signal name indicates that the signal performs its intended function when it is in the low state.

Abbreviations are based on ANSI Y1.1-1972.

Other ANSI standards that are used in the preparation of diagrams by Tektronix, Inc. are:

Y14.15, 1966 Drafting Practices.
Y14.2, 1973 Line Conventions and Lettering.
Y10.5, 1968 Letter Symbols for Quantities Used in Electrical Science and Electrical Engineering.
American National Standard Institute

1430 Broadway New York, New York 10018

#### **Component Values**

Electrical components shown on the diagrams are in the following units unless noted otherwise:

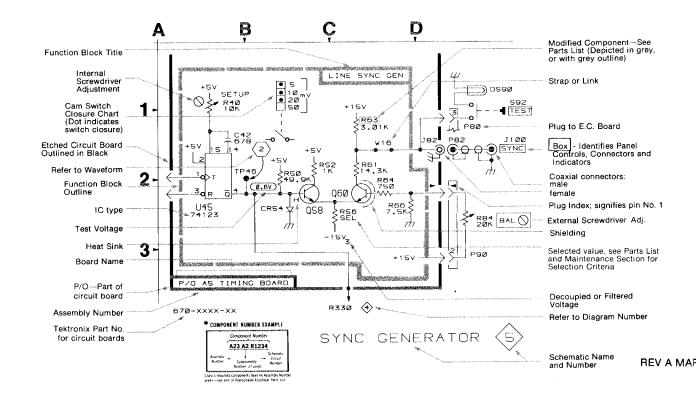

Capacitors = Values one or greater are in picofarads (pF). Values less than one are in microfarads  $(\mu F)$ .

Resistors = Ohms ( $\Omega$ ).

## ---- The information and special symbols below may appear in this manual.------

#### **Assembly Numbers and Grid Coordinates**

Each assembly in the instrument is assigned an assembly number (e.g., A20). The assembly number appears on the circuit board outline on the diagram, in the title for the circuit board component location illustration, and in the lookup table for the schematic diagram and corresponding component locator illustration. The Replaceable Electrical Parts list is arranged by assemblies in numerical sequence; the components are listed by component number \*(see following illustration for constructing a component number). The schematic diagram and circuit board component location illustration have grids. A lookup table with the grid coordinates is provided for ease of locating the component. Only the components illustrated on the facing diagram are listed in the lookup table. When more than one schematic diagram is used to illustrate the circuitry on a circuit board, the circuit board illustration may only appear opposite the first diagram on which it was illustrated; the lookup table will list the diagram number of other diagrams that the circuitry of the circuit board appears on.

## MAINFRAME LOGIC DIAGRAM 4

#### **VOLTAGE CONDITIONS**

The voltages shown were taken with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B); READOUT INTENSITY (OFF). No plug-in units were installed.

Voltage Conditions. The voltages on the diagram were taken using a digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or a Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope).

Reverse Side

Mainframe

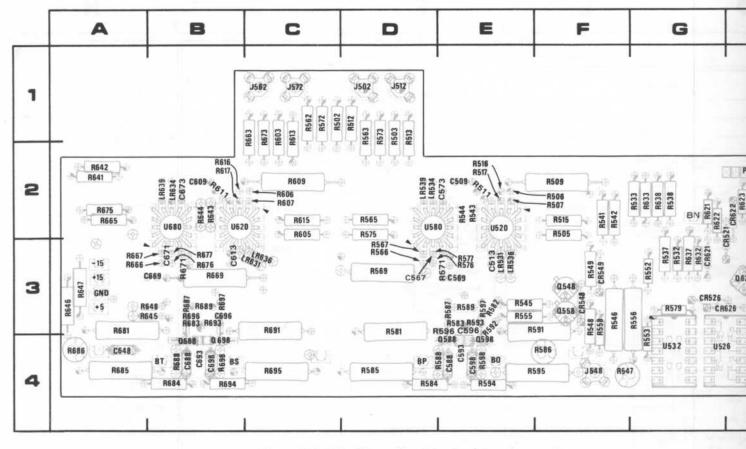

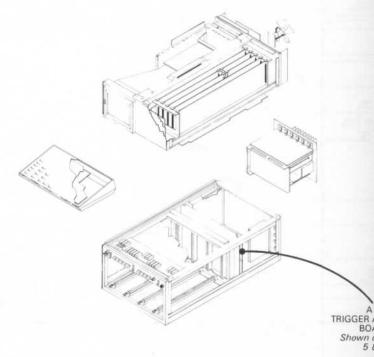

Figure 7-6. A13-Trigger Amplifier circuit board assembly.

#### COMPONENT NUMBER EXAMPLE

Chassis-mounted components have no Assembly Number prefix-see end of Replaceable Electrical Parts List.

R 1981

#### **VOLTAGE CONDITIONS**

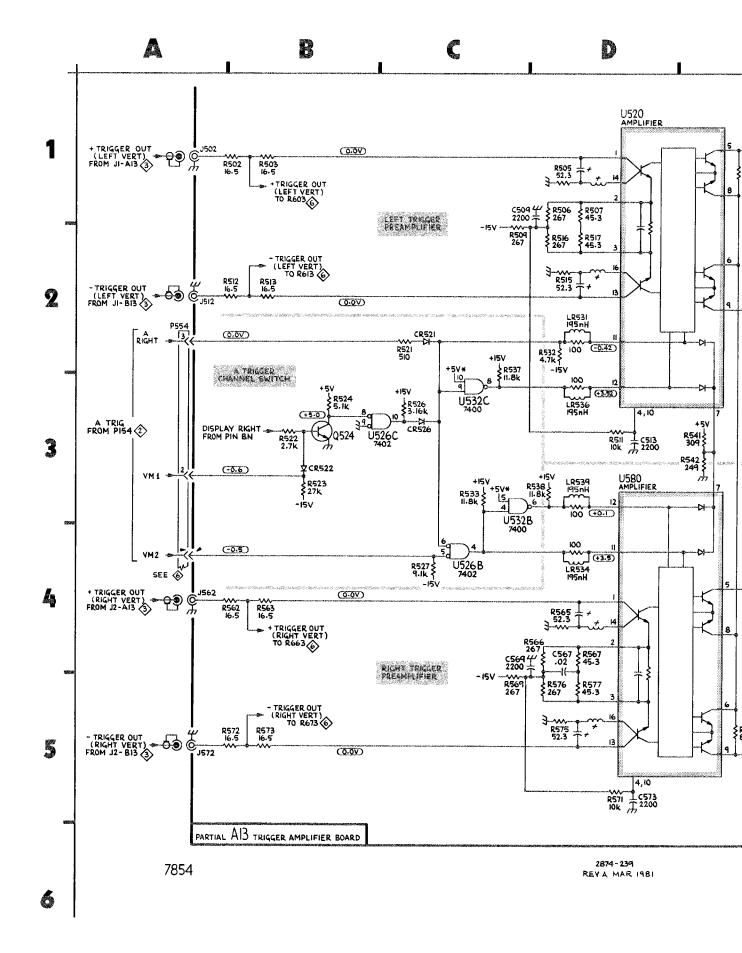

The voltages shown were taken with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B). All variable controls were set to mid-range. No plug-in units were installed.

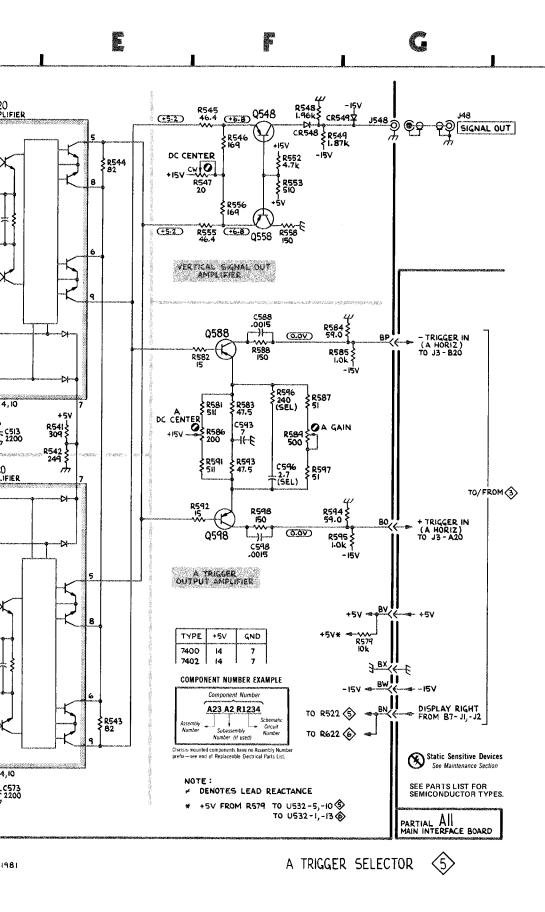

**Voltage Conditions.** The voltages on the diagram were taken using digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or a Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope).

## Selectable Electrical Parts Table

#### For Diagram 5

| Component Number | Reason For Selection        | Component Value |
|------------------|-----------------------------|-----------------|
| A13R596          | To obtain trigger bandwidth | 10240Ω          |
| A13C596          |                             | 2.76.8 pF       |

#### VOLTAGE CONDITIONS

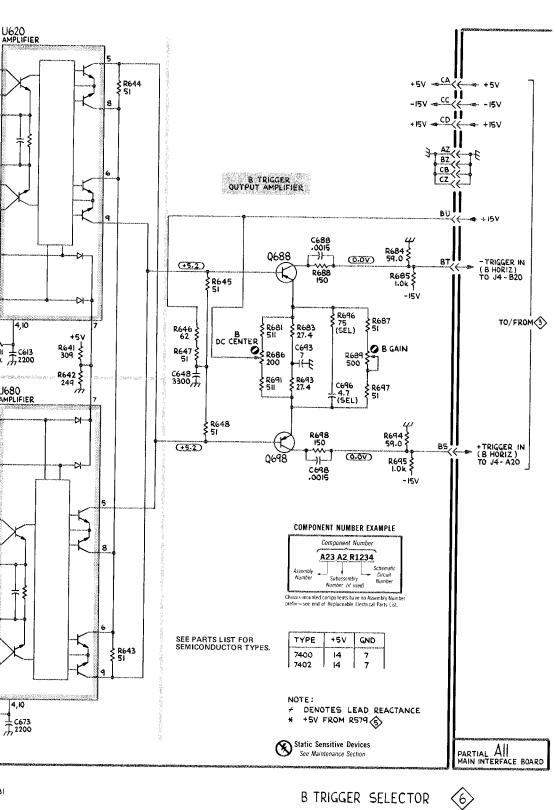

The voltages shown were taken with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B). All variable controls were set to midrange. No plug-in units were installed.

Voltage Conditions. The voltages on the diagram were taken using a digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or a Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope.

## VERTICAL CHANNEL SWITCH DIAGRAM 7

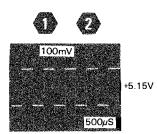

#### VOLTAGE AND WAVEFORM CONDITIONS

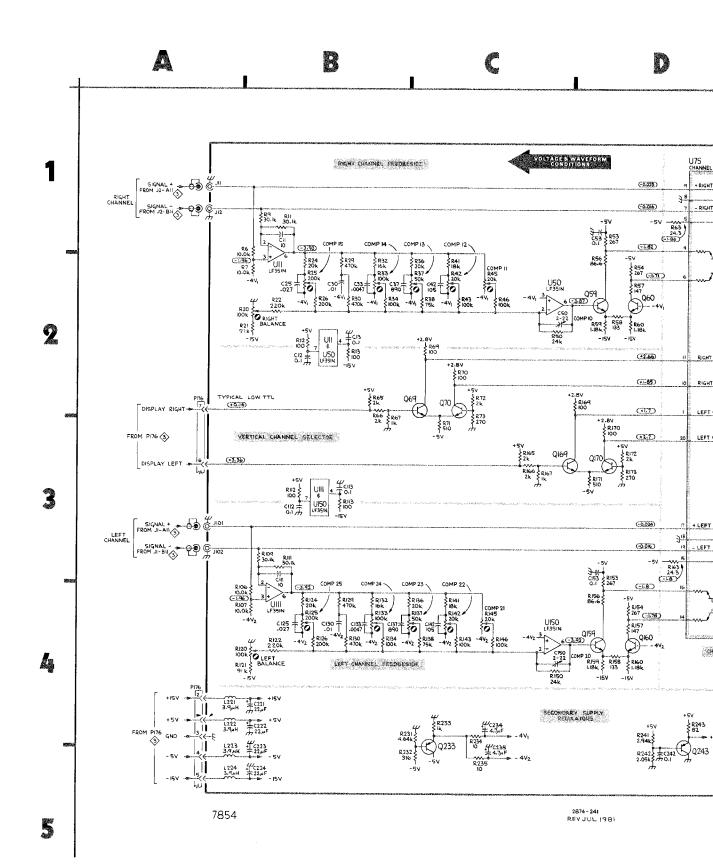

The voltages and waveforms shown were obtained with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B); READOUT INTENSITY (OFF).

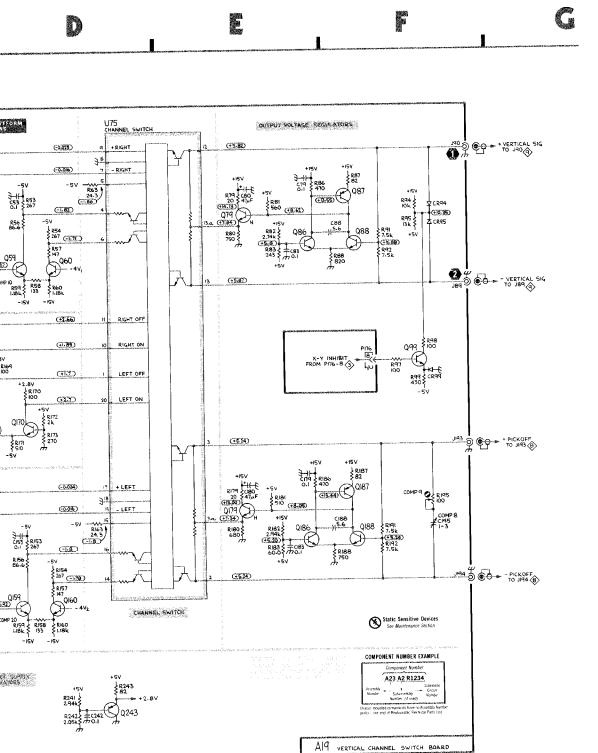

**Voltage Conditions.** The voltages were taken with a digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope).

Waveform Conditions. The waveforms shown below were obtained using a test oscilloscope system with 10 M $\Omega$  impedance, at least 60 MHz bandwidth and 10X probe (Tektronix 7603 Oscilloscope, 7B92 Time Base, 7A13 Differential Comparator and P6063A Probe).

A Calibration Fixture (Tektronix 067-0587-01 with controls set as follows: REP RATE (1 KHz); STEP RESPONSE (+); AMPLITUDE (6 divisions) was installed in the LEFT VERT compartment of the 7854 and a 7B80 Time Base with controls set as follows: TRIGGERING (P-P AUTO, AC, INT); TIME/DIV (1 ms) was installed in the B Horizontal compartment of the 7854.

#### **VOLTAGE CONDITIONS**

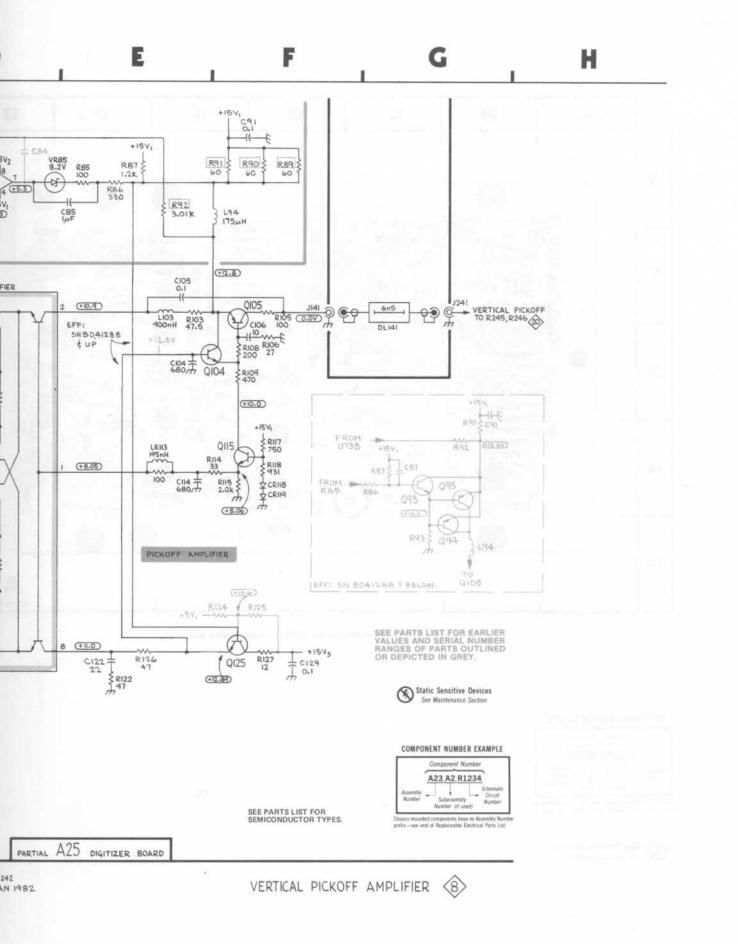

The voltages shown were taken with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HOPIZONTAL MODE (B); READOUT INTENSITY (OFF). No plug-in units were installed.

Voltage Conditions. The voltages on the diagram were taken using a digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or a Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope.

### Selectable Electrical Parts Table For Diagram 8

### **VERTICAL AMPLIFIER DIAGRAM 9**

~ a.

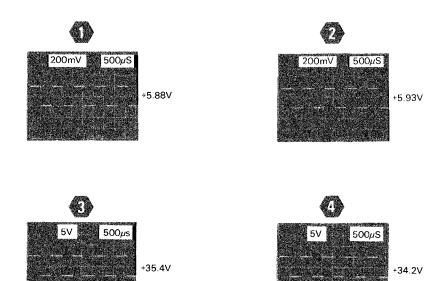

#### **VOLTAGE AND WAVEFORM CONDITIONS**

The voltages and waveforms were taken with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B); READOUT INTENSITY (OFF). No plug-in units were installed.

**Voltage Conditions.** The voltages on the diagram were taken using a digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or a Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope).

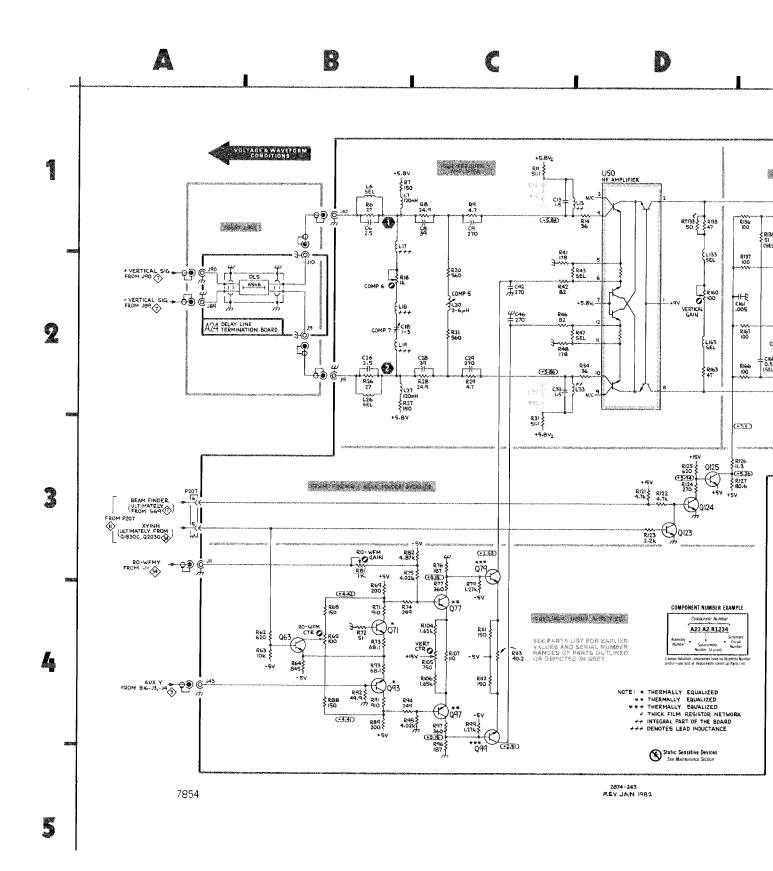

Waveform Conditions. The waveforms shown below were obtained using a test oscilloscope system with 10 M $\Omega$  input impedance, at least 60 MHz bandwidth and 10X probe (Tektronix 7603 Oscilloscope, 7B92 Time Base, 7A13 Differential Comparator and P6063A Probe).

A Calibration Fixture (Tektronix 067-0587-01) with controls set as follows: REP RATE (1 KHz); STEP RESPONSE (+); AMPLITUDE (adjust to 6 divisions) was installed in the LEFT VERT compartment of the 7854 and a 7880 Time Base with controls set as follows: TRIGGERING (P-P AUTO, AC, INT); TIME/DIV (1 ms) was installed in the B HORIZ compartment of the 7854.

### Selectable Electrical Parts Table For Diagram 9

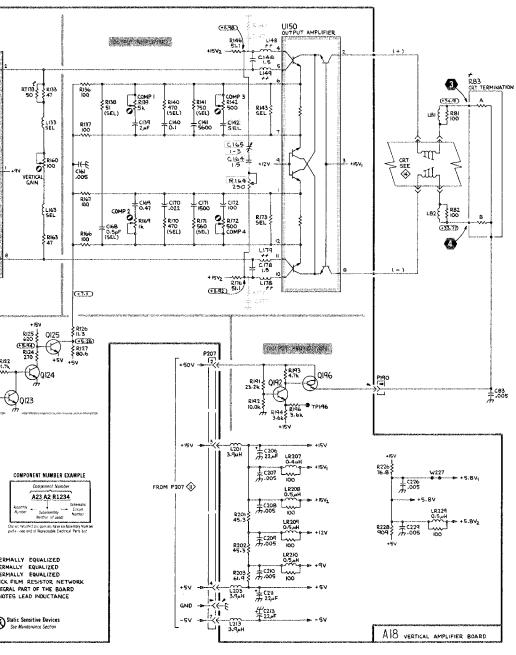

| Component Number | Reason For Selection                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Component Value           |

\*Located on back of board.

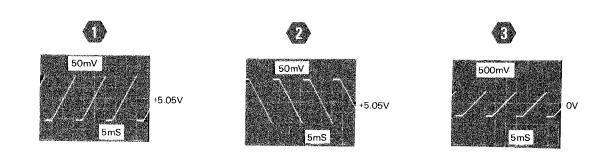

#### **VOLTAGE AND WAVEFORM CONDITIONS**

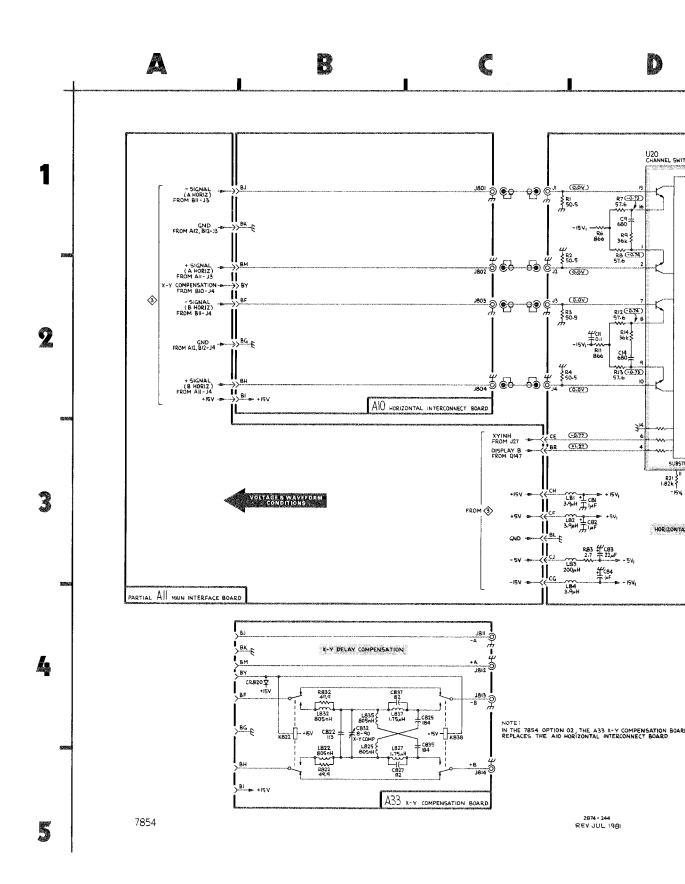

The voltage and waveforms were taken with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B); READOUT INTENSITY (OFF). No plug-in units were installed.

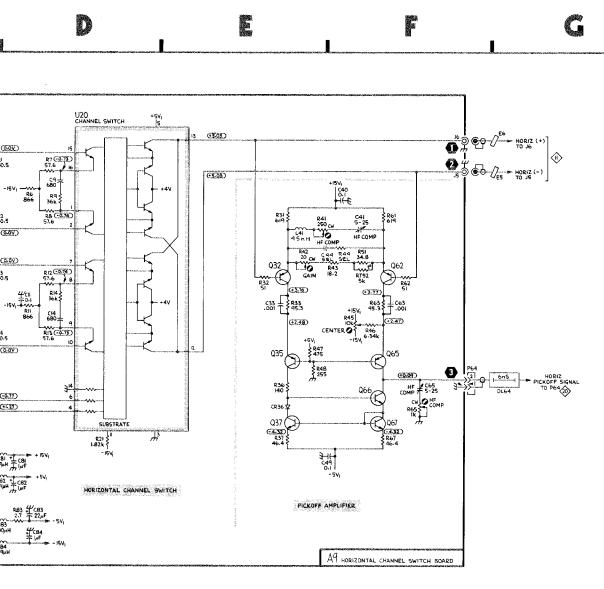

**Voltage Conditions.** The voltages on the diagram were taken using a digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or a Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope).

Waveform Conditions. The waveforms shown below were obtained using a test oscilloscope system with 10 M $\Omega$  input impedance, at least 60 MHz bandwidth and 10X probe (Tektronix 7603 Oscilloscope, 7B92 Time Base, 7A13 Differential Comparator and P6063A Probe).

A Calibration Fixture (Tektronix 067-0587-01) with controls set as follows: REP RATE (1 KHz); STEP RESPONSE (+); AMPLITUDE (adjust to 6 divisions) was installed in the LEFT VERT compartment of the 7854 and a 7880 Time Base with controls set as follows: TRIGGERING (P-P AUTO, AC, INT); TIME/DIV (1 ms) was installed in the B Horizontal compartment

# HORIZONTAL AMPLIFIER DIAGRAM 11

\*See Parts List for serial number ranges.

6

2874-711A

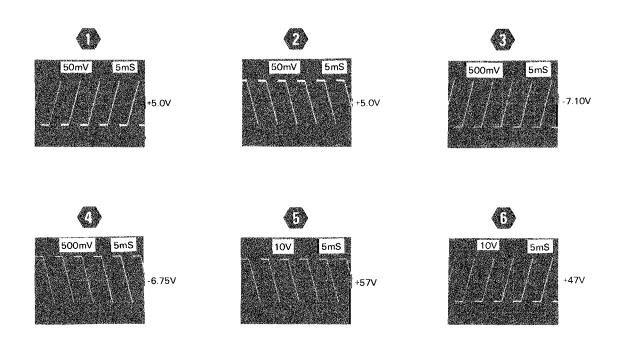

#### VOLTAGE AND WAVEFORM CONDITIONS

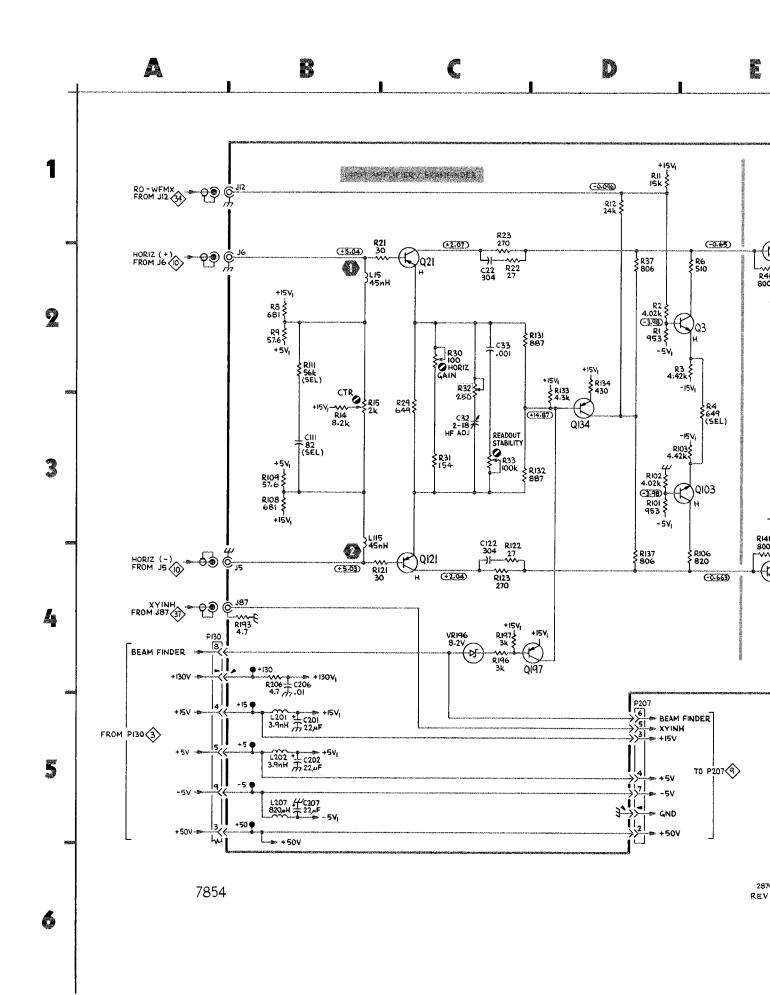

The voltages and waveforms were taken with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B); READOUT INTENSITY (OFF). No plug-in units were installed.

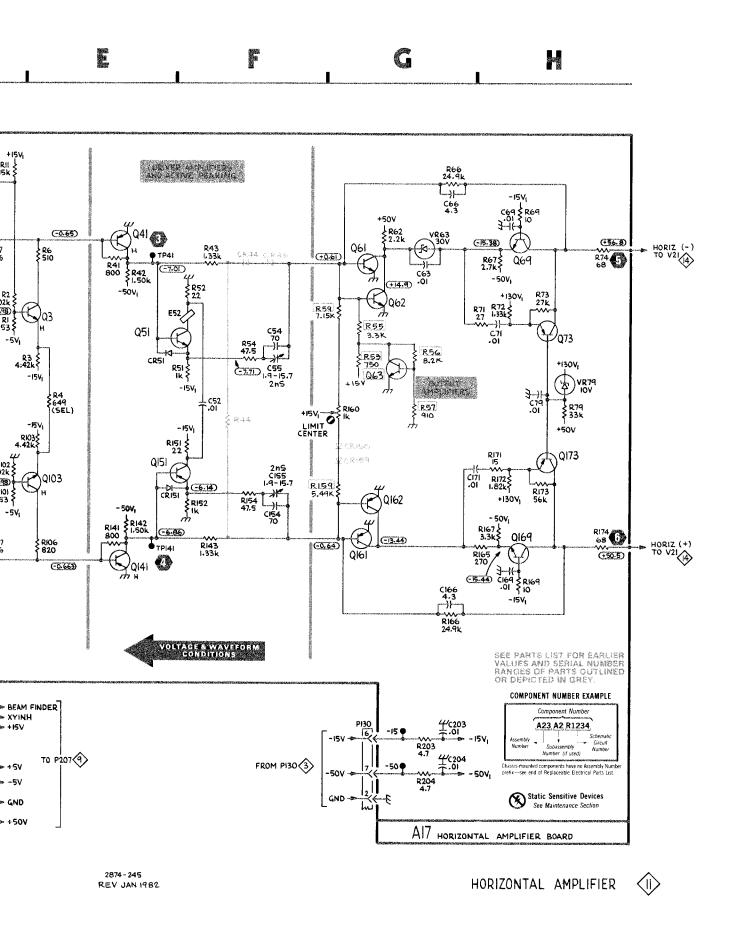

**Voltage Conditions.** The voltages on the diagram were taken using a digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or a Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope).

Waveform Conditions. The waveforms shown below were obtained using a test oscilloscope system with 10 M $\Omega$  input impedance, at least 60 MHz bandwidth and 10X probe (Tektronix 7603 Oscilloscope, 7B92 Time Base, 7A13 Differential Comparator and P6063A Probe).

A Calibration Fixture (Tektronix 067-0587-01) with controls set as follows: REP RATE (1 KHz); STEP RESPONSE (+); AMPLITUDE (adjust to 6 divisions) was installed in the LEFT VERT compartment of the 7854 and a 7B80 Time Base with controls set as follows: TRIGGERING (P-P AUTO, AC, INT); TIME/DIV (1 ms) was installed in the B HORIZ compartment of the 7854.

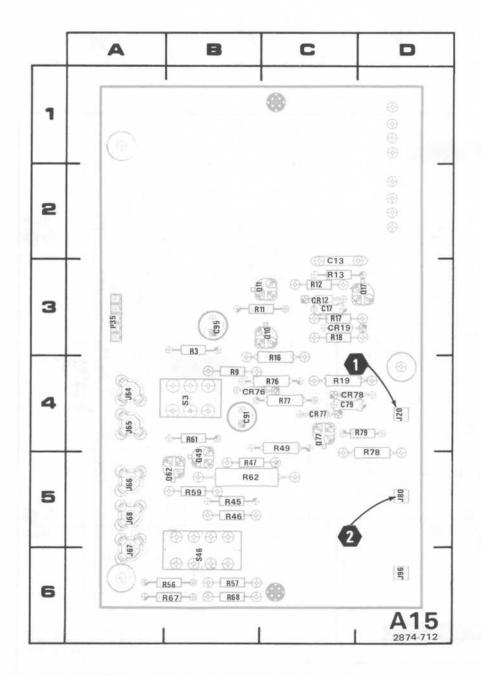

Horizontal Amplifier

Reverse Side A15

#### COMPONENT NUMBER EXAMPLE

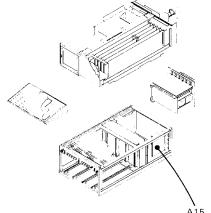

Chassis-mounted components have no Assembly Numbe prefix-see end of Replaceable Electrical Parts List.

A15 SIGNAL OUTPUT BOARD Shown on diag. 12

REV A MAR 1981

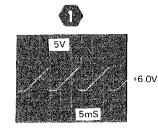

#### VOLTAGE AND WAVEFORM CONDITIONS

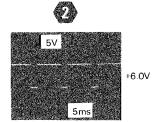

The voltages and waveforms were taken with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B); READOUT INTENSITY (OFF). No plug-in units were installed.

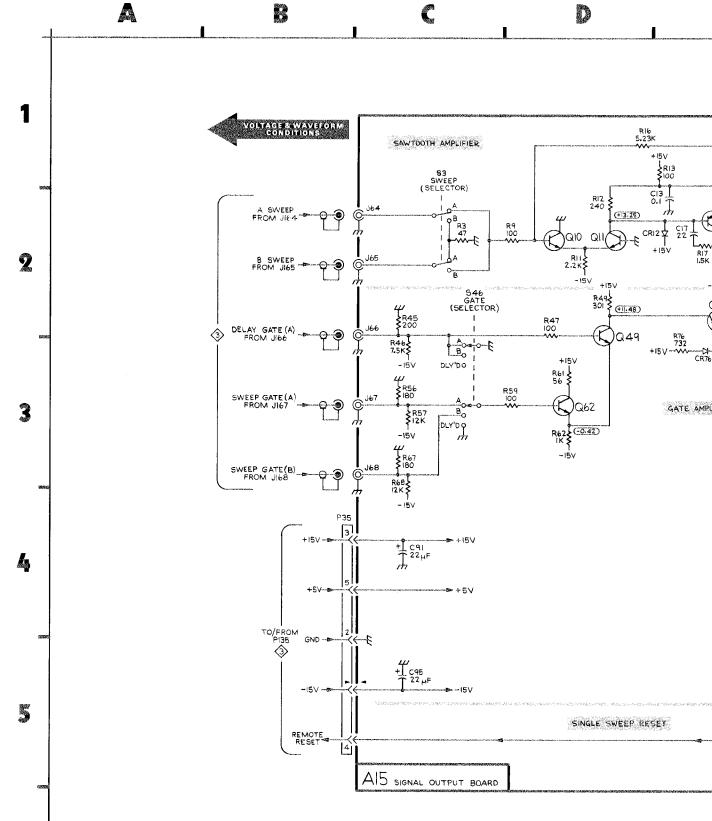

**Voltage Conditions.** The voltages on the diagram were taken using a digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or a Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope).

Waveform Conditions. The waveforms shown below were obtained using a test oscilloscope system with 10 MΩ input impedance, at least 60 MHz bandwidth and 10X probe (Tektronix 7603 Oscilloscope, 7B92 Time Base, 7A13 Differential Comparator and P6063A Probe).

A Calibration Fixture (Tektronix 067-0587-01) with controls set as follows: REP RATE (1 KHz); STEP RESPONSE (+); AMPLITUDE (adjust to 6 divisions) was installed in the LEFT VERT compartment of the 7854 and a 7880 Time Base with controls set as follows: TRIGGERING (P-P AUTO, AC, INT); TIME/DIV (1 ms) was installed in the B HORIZ compartment of the 7854.

#### **VOLTAGE AND WAVEFORM CONDITIONS**

The voltages and waveforms shown were obtained with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B); READOUT INTENSITY (OFF).

**Voltage Conditions.** The voltages were taken with a digital multimeter with a  $10M\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope).

Waveform Conditions. The waveforms shown below were obtained using a test oscilloscope system with 10 M $\Omega$  input impedance, at least 60 MHz bandwidth and 10X probe (Tektronix 7603 Oscilloscope, 7B92 Time Base, 7A13 Differential Comparator and P6063A Probe).

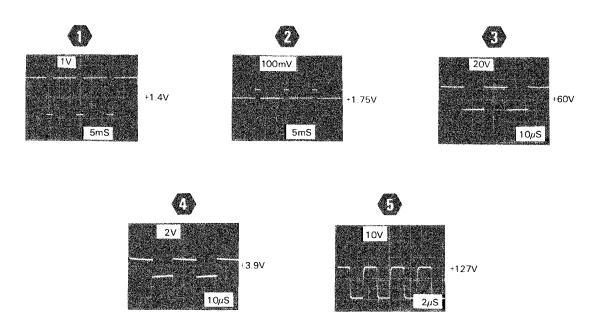

Waveform 1 conditions: 7B80 Time Base with controls set as follows: TIME/DIV (1 ms); TRIGGERING (P-P AUTO, AC, INT) was installed in the B HORIZ compartment of the 7854. 7854 conditions: A and B INTENSITY midrange.

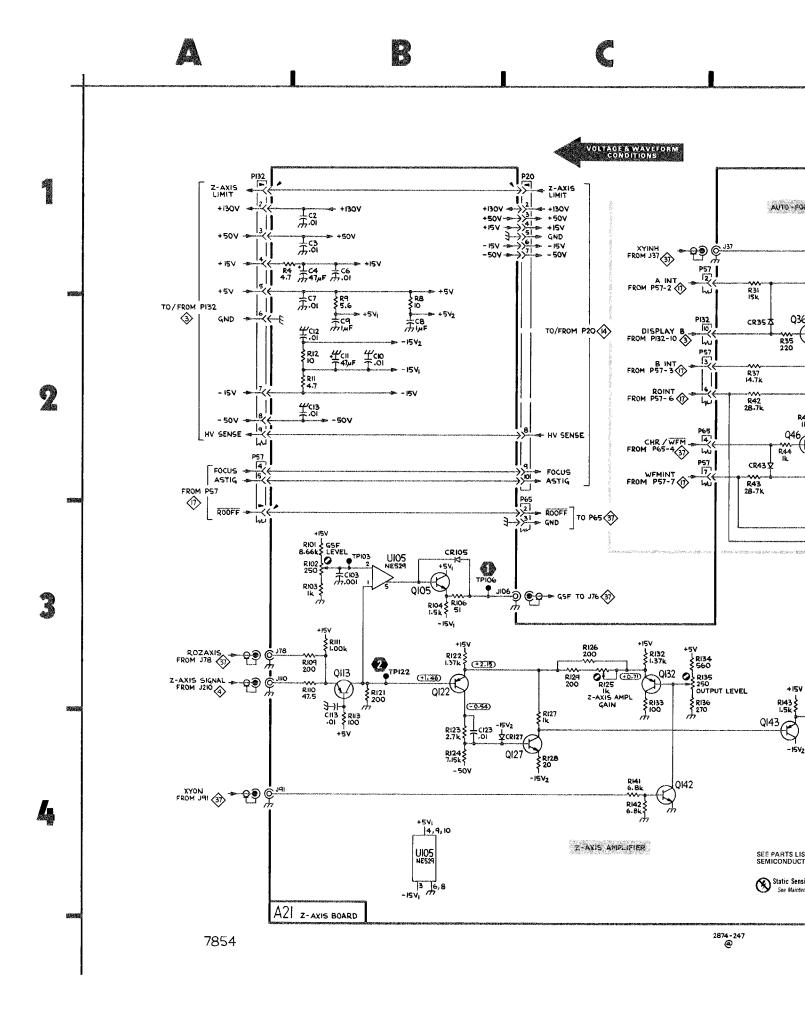

Waveform 2 conditions: Same as 1 above except B INTENSITY fully CCW.

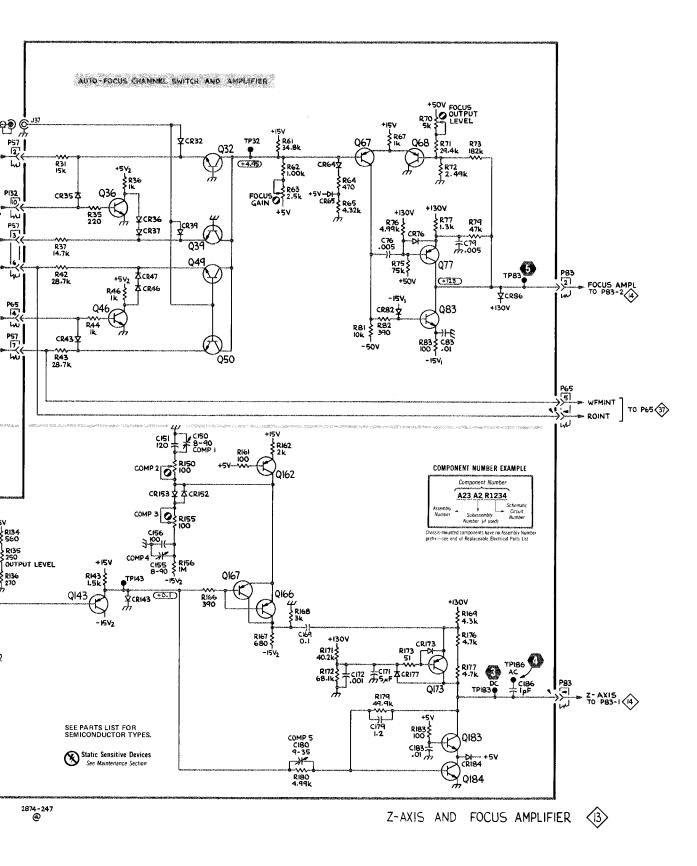

Waveform 3 conditions: Same as 1 above except 7B80 Time Base set for 2  $\mu$ s/div.

Waveform 4 conditions: Same as 1 above except 7B80 Time Base set for 2  $\mu$ s/div. A Calibration Fixture (Tektronix 067-0587-01 with controls set as follows: REP RATE (100 KHz); STEP RESP (+) was installed in the LEFT VERT compartment of the 7854.

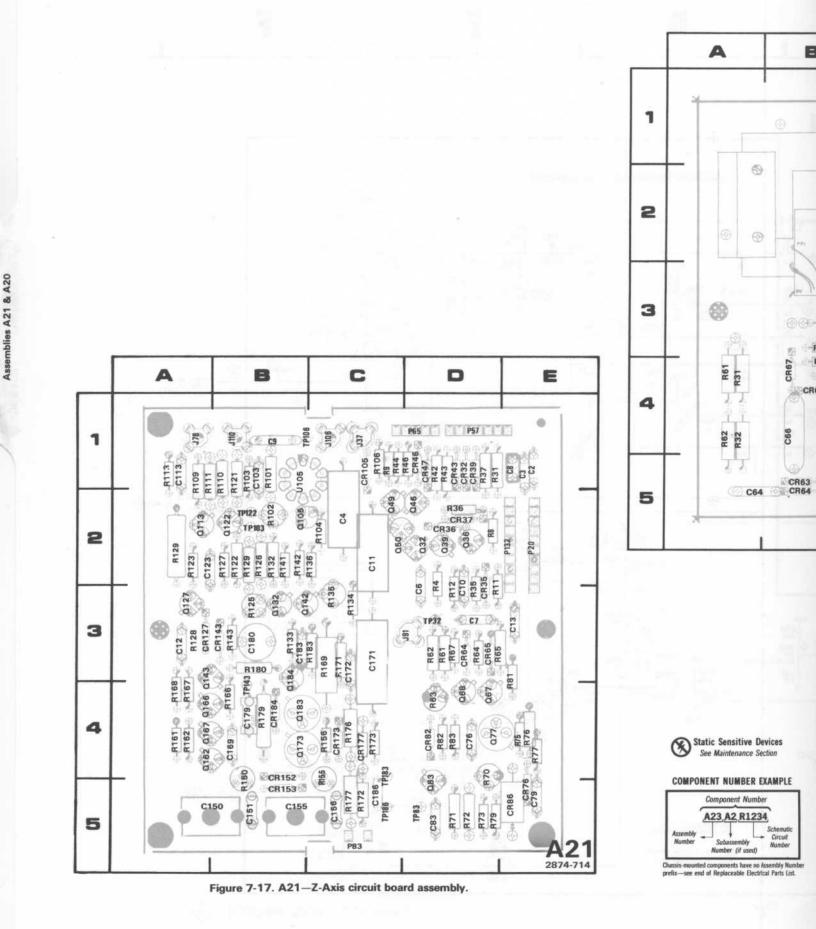

Waveform 5 conditions: Same as 1 above except 7854 in CHOP mode, A INTENSITY (CCW) 7B80 Time Base set for 1  $\mu$ s/div.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## **VOLTAGE AND WAVEFORM CONDITIONS**

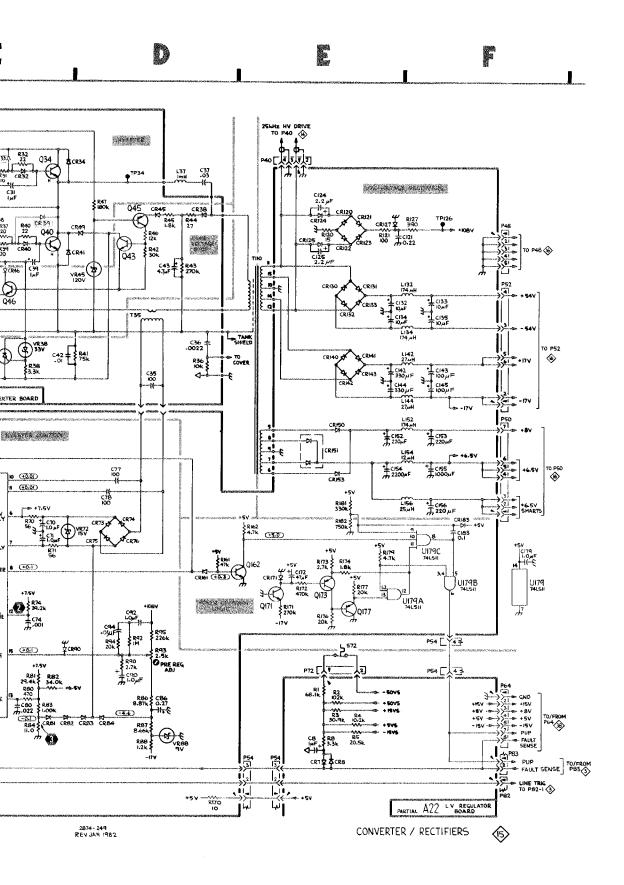

The voltages shown were obtained with the 7854 front panel variable controls at midrange except INTENSITY controls fully counterclockwise; VERTICAL MODE (LEFT); TRIGGER SOURCE (VERT MODE); HORIZONTAL MODE (B). No plug-in units were installed.

Voltage Conditions. The voltages shown on the diagram were obtained using a digital multimeter with a 10 M $\Omega$  input impedance. (Tektronix DM501 Digital Multimeter.)

Waveform Conditions. The waveforms shown below were obtained using a test oscilloscope system with 1 M $\Omega$  input impedance and at least 60 MHz bandwidth. (Tektronix 7603 Oscilloscope, 7B53A Time Base, and 7A13 Differential Comparator equipped with a 10X probe.)

Rectifiers

A22 & A16 🐺

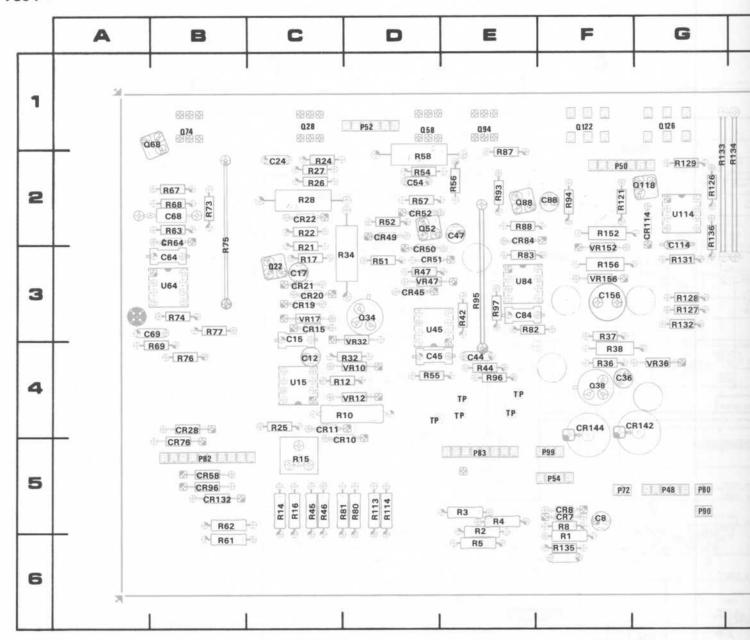

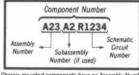

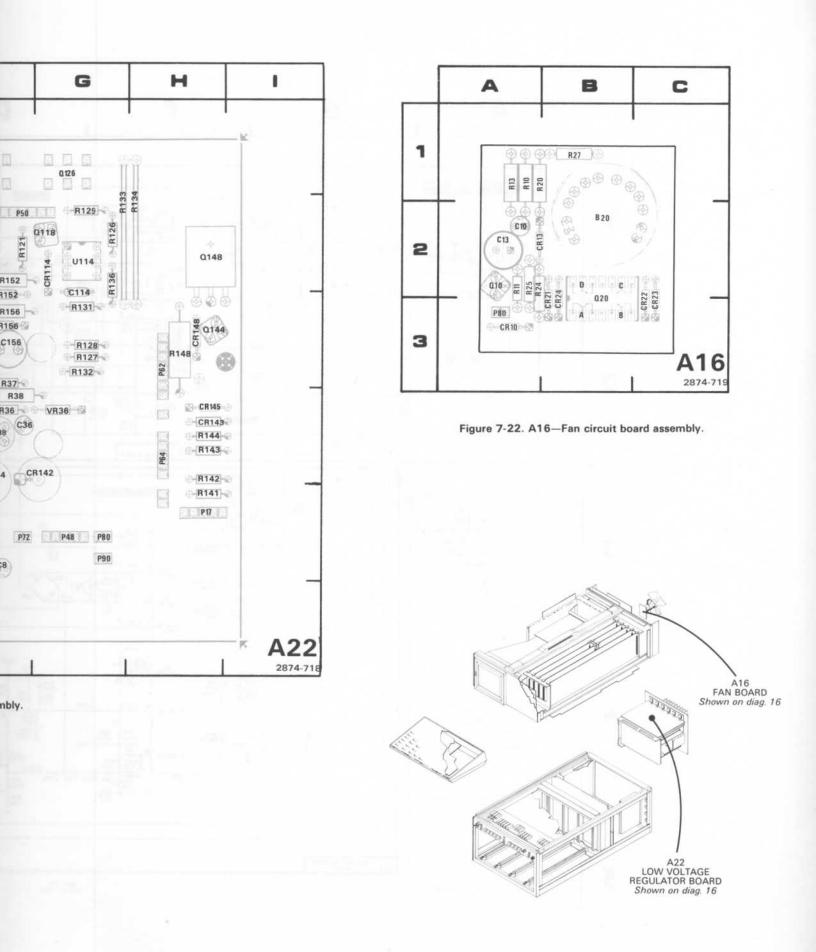

Figure 7-21. A22-Low Voltage circuit board assembly.

#### COMPONENT NUMBER EXAMPLE

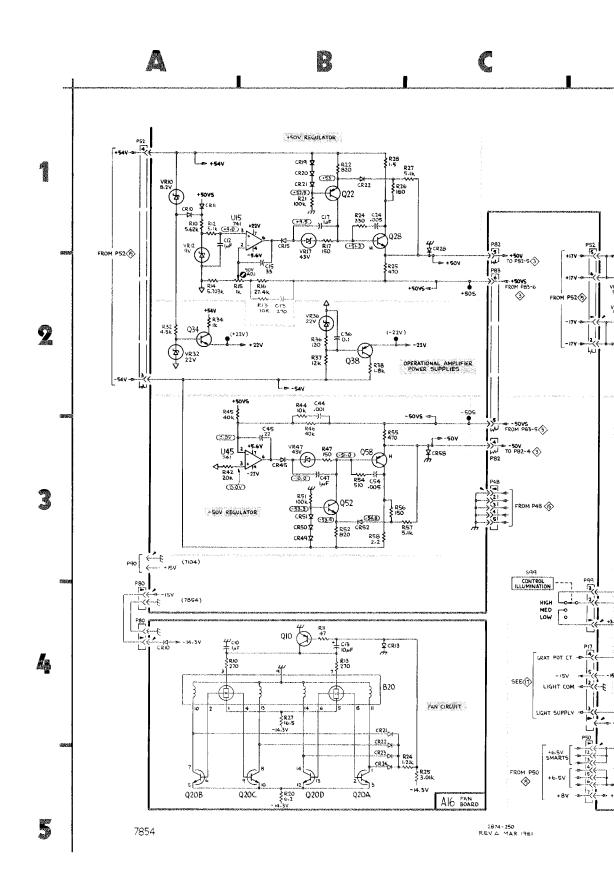

Chassis-mounted components have no Assembly Number prefix--see end of Replaceable Electrical Parts List.

Static Sensitive Devices See Maintenance Section

# LOW-VOLTAGE REGULATOR AND FAN BOARD DIAGRAM 16

Low Voltage Regulators and Fan Board

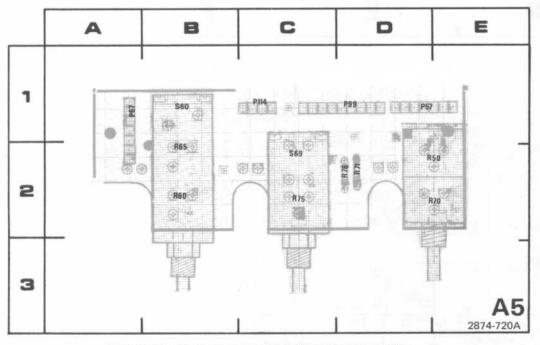

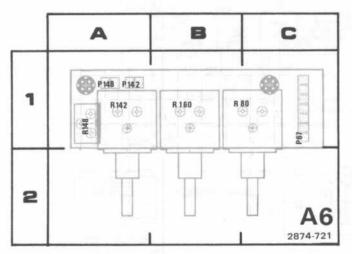

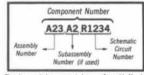

Figure 7-23. A5-Intensity Control circuit board assembly.

### COMPONENT NUMBER EXAMPLE

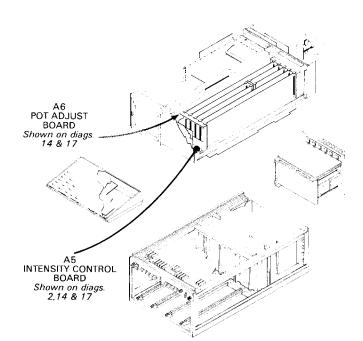

Chassis-mounted components have no Assembly Number prefix—see end of Replaceable Electrical Parts List.

Static Sensitive Devices See Maintenance Section

#### VOLTAGE CONDITIONS

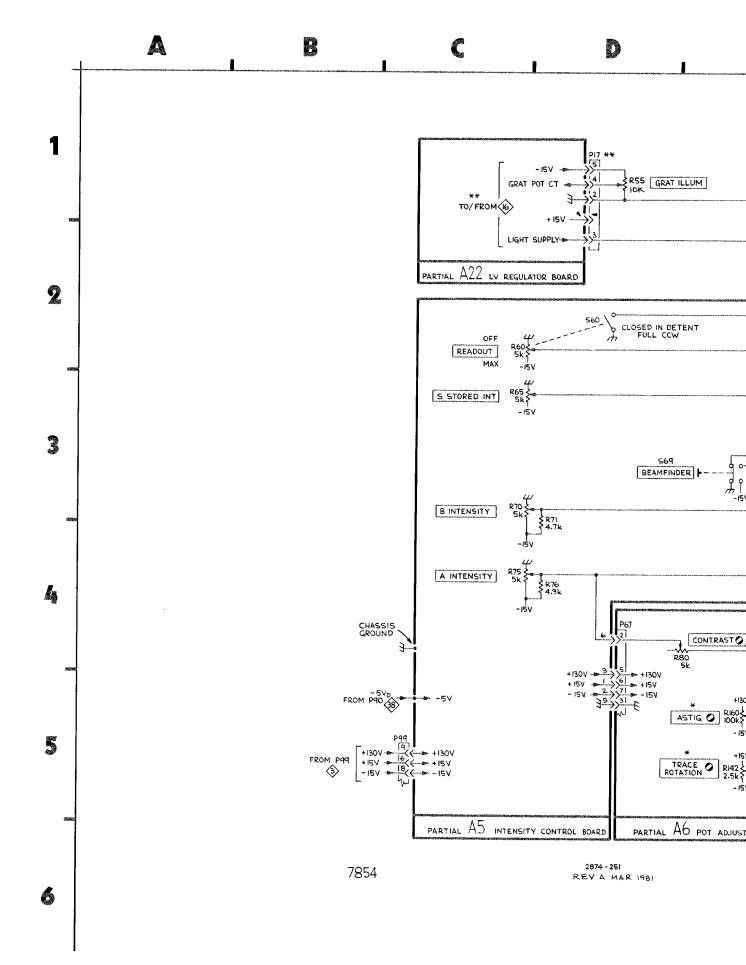

The voltages shown were taken with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B); READOUT INTENSITY (OFF). No plug-in units were installed.

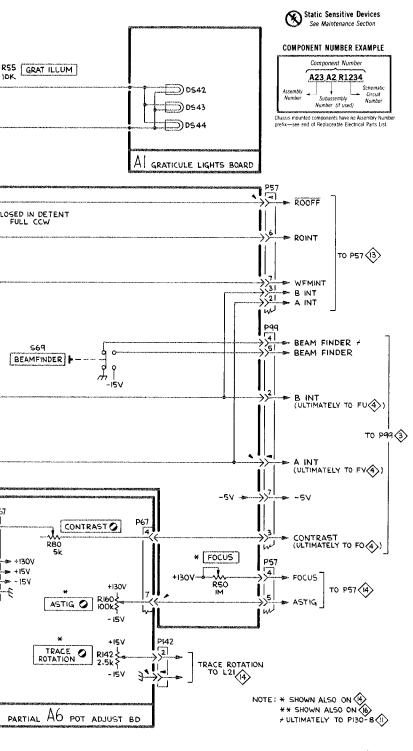

Voltage Conditions. The voltages on the diagram were taken using a digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or a Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope).

Static Sensitive Devices See Maintenance Section

## COMPONENT NUMBER EXAMPLE

Chassis-mounted components have no Assembly Number prefix—see end of Replaceable Electrical Parts List.

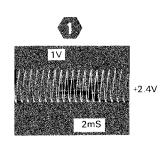

**REV JAN 1982** 

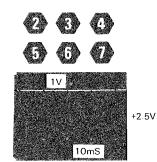

### VOLTAGE AND WAVEFORM CONDITIONS

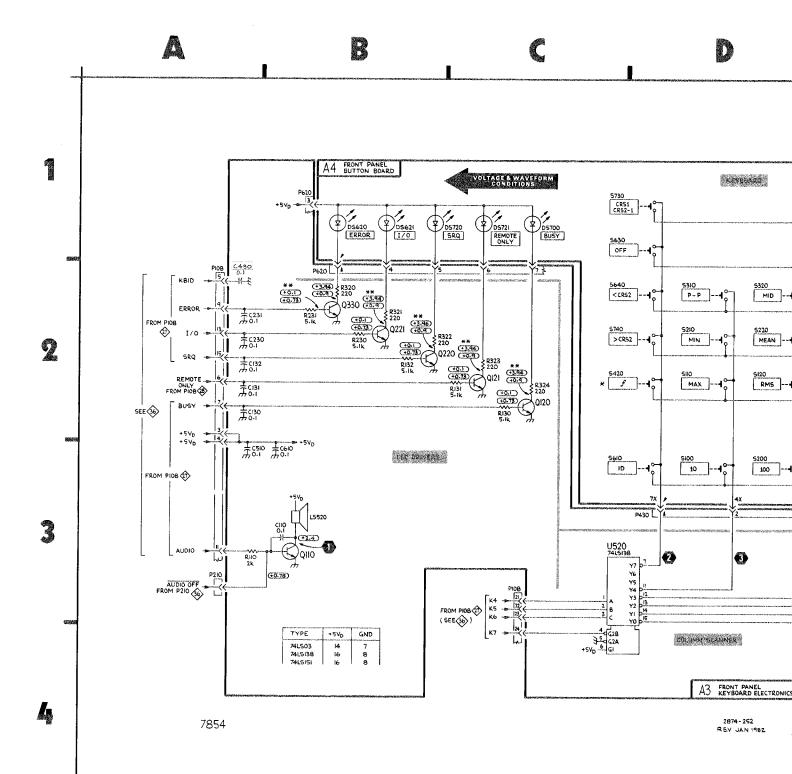

The voltages and waveforms shown were obtained with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B); READOUT INTENSITY (OFF).

**Voltage Conditions.** The voltages were taken with a digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope).

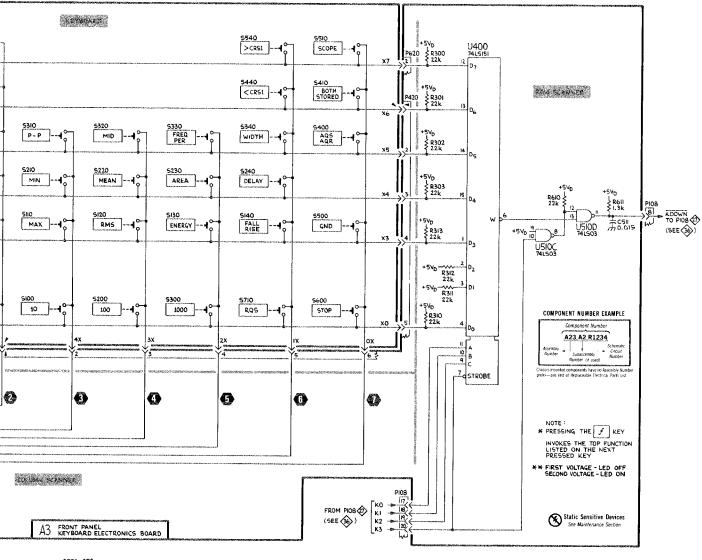

Waveform Conditions. The waveforms shown below were obtained using a test oscilloscope system with 10 M $\Omega$  input impedance, at least 60 MHz bandwidth and 10X probe (Tektronix 7603 Oscilloscope, 7B92 Time Base, 7A13 Differential Comparator and P6063A Probe).

board assembly.

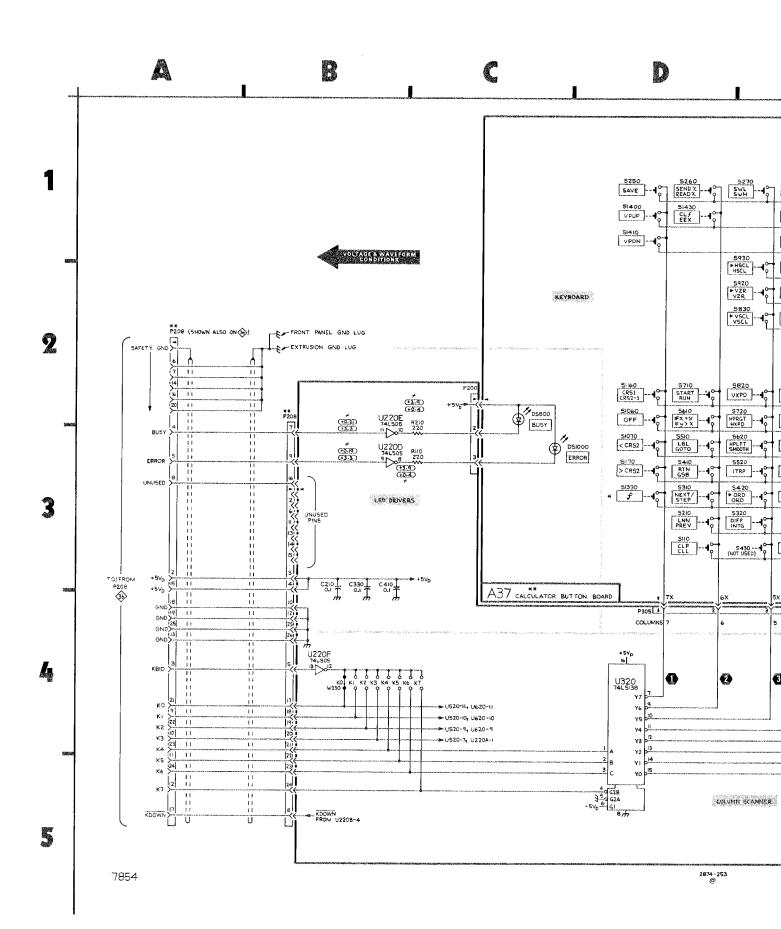

#### **VOLTAGE AND WAVEFORM CONDITIONS**

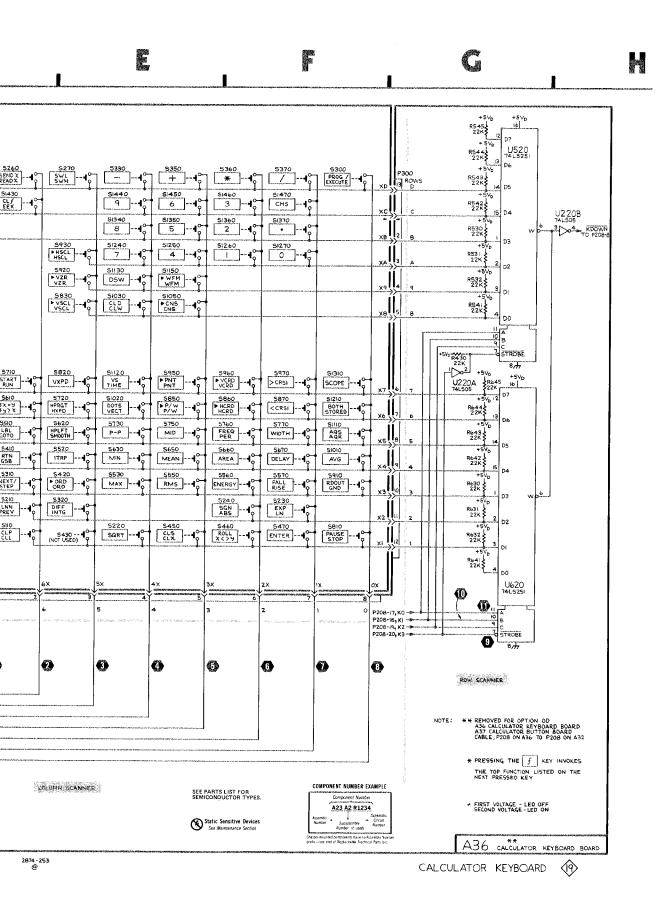

The voltages and waveforms shown were obtained with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B); READOUT INTENSITY (OFF).

Voltage Conditions. The voltages were taken with a digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope.

Waveform Conditions. The waveforms shown below were obtained using a test oscilloscope system with 10 M $\Omega$  input impedance, at least 60 MHz bandwidth and 10X probe (Tektronix 7603 Oscilloscope, 7B92 Time Base, 7A13 Differential Comparator and P6063A Probe).

\* Mounted on back of board

#### **VOLTAGE AND WAVEFORM CONDITIONS**

The voltages and waveforms shown were taken with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B); READOUT INTENSITY (MIDRANGE).

Voltage Conditions. The voltages on the diagram were taken using a digital multimeter with a 10 M $\Omega$  input impedance (Tektronix DM 501 Digital Multimeter installed in a TM 501 Power Module or Tektronix 7D13 Digital Multimeter used with a readout-equipped 7000-Series Oscilloscope.

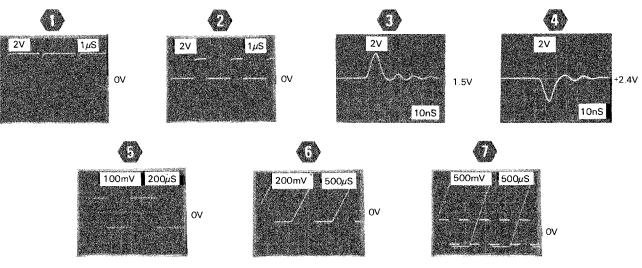

A 7A26 Dual Trace Amplifier with coupling switch set to Gnd was installed in the LEFT VERT compartment of the 7854.

Waveform Conditions. The waveforms shown below were obtained using a test oscilloscope system with 10 M $\Omega$  input impedance, at least 60 MHz bandwidth and 10X probe (Tektronix 7603 Oscilloscope, 7B92 Time Base, 7A13 Differential Comparator and P6063A Probe).

A Tektronix 7A26 Dual Trace Amplifier with controls set as follows: VOLTS/DIV (0.1 V); DISPLAY MODE (CH1) was installed in the LEFT/VERT compartment of the 7854.

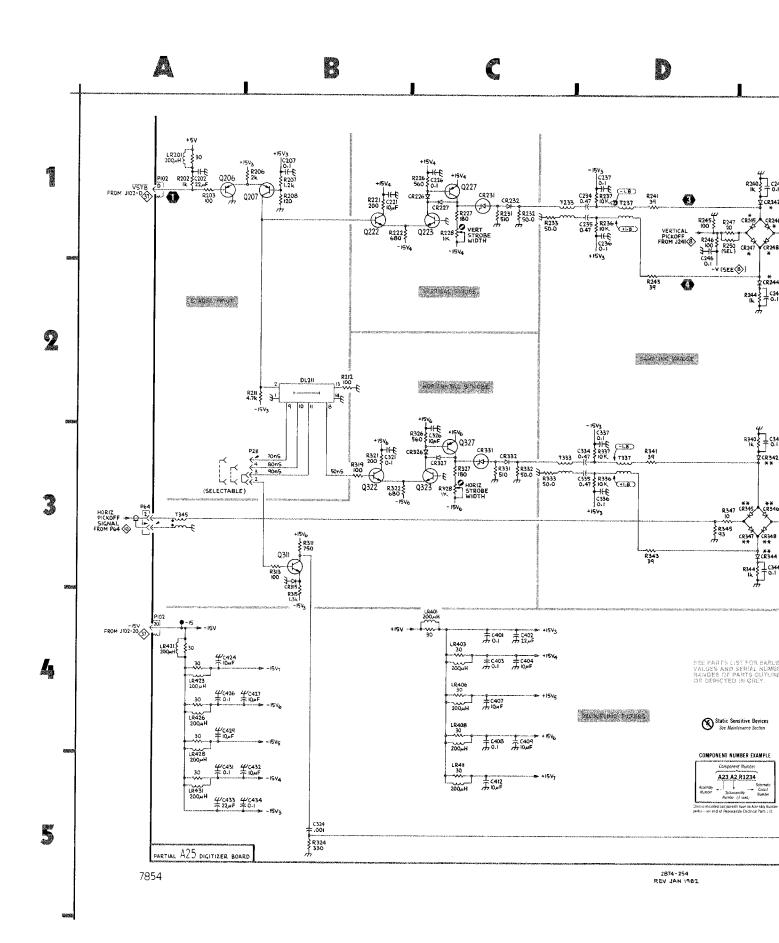

The 0.4 V CALIBRATOR signal was applied to the channel 1 bnc input connector.

A Time Base (Tektronix 7B15) with controls set as follows: TRIGGERING (NORM, AC, INT); TIME/DIV (1 ms) was installed in the B HORIZ compartment of the 7854.

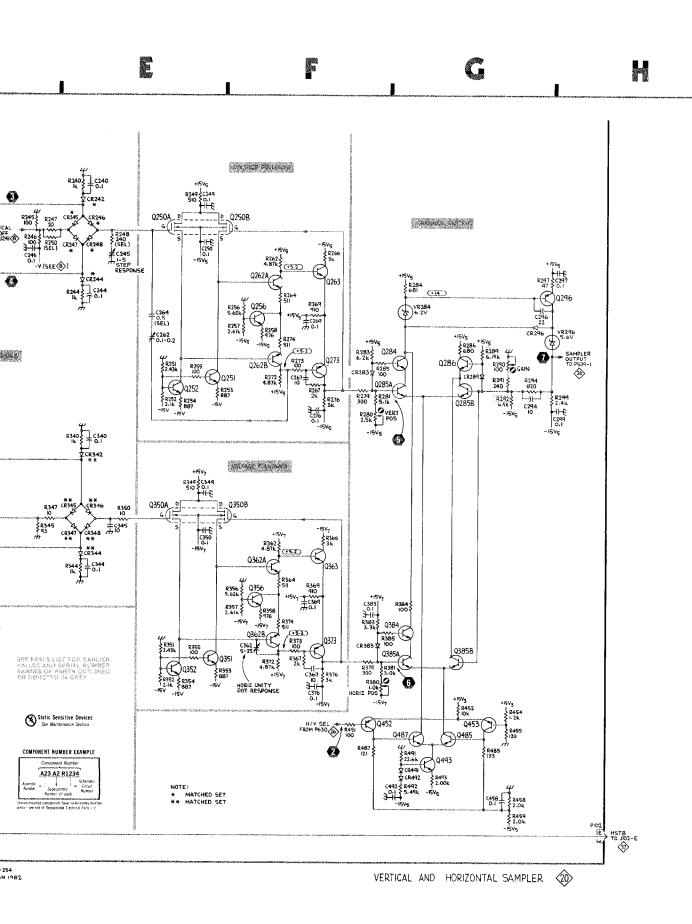

## Selectable Electrical Parts Table For Diagram 20.

| Component Number | Reason For Selection                                                                                                           | Component Value           |
|------------------|--------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| A25R248          | Affects the first 3 ns of high-frequency transient response. Increasing the resistance lowers the front corner and vice-versa. | 220Ω<br>240Ω<br>270Ω      |
| A25R250          | Affects first 1 ns of high-frequency transient response. Decreasing the resistance raises the front corner and vice-versa.     | 91Ω<br>36Ω<br>18Ω<br>8.2Ω |
| A25C264          | Affects Unity Dot response. Increasing the capacitance lowers the first 3.5 $\mu$ s of the vertical transient response.        | 0.5pF<br>1.0pF<br>1.5pF   |

### WAVEFORM CONDITIONS

The waveforms shown were taken with the 7854 controls set as follows: CRT DISPLAY (SCOPE); TRIGGER SOURCE (VERT MODE); VERTICAL MODE (LEFT); HORIZONTAL MODE (B); READOUT INTENSITY (MIDRANGE).

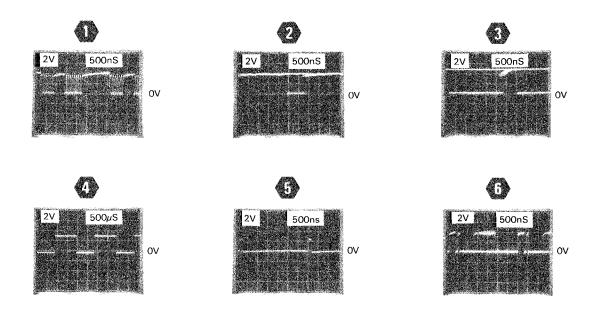

Waveform Conditions. The waveforms shown below were obtained using a test oscilloscope system with 10 M $\Omega$  input impedance, at least 60 MHz bandwidth and 10X probe (Tektronix 7603 Oscilloscope, 7B92 Time Base, 7A13 Differential Comparator and P6063A Probe).

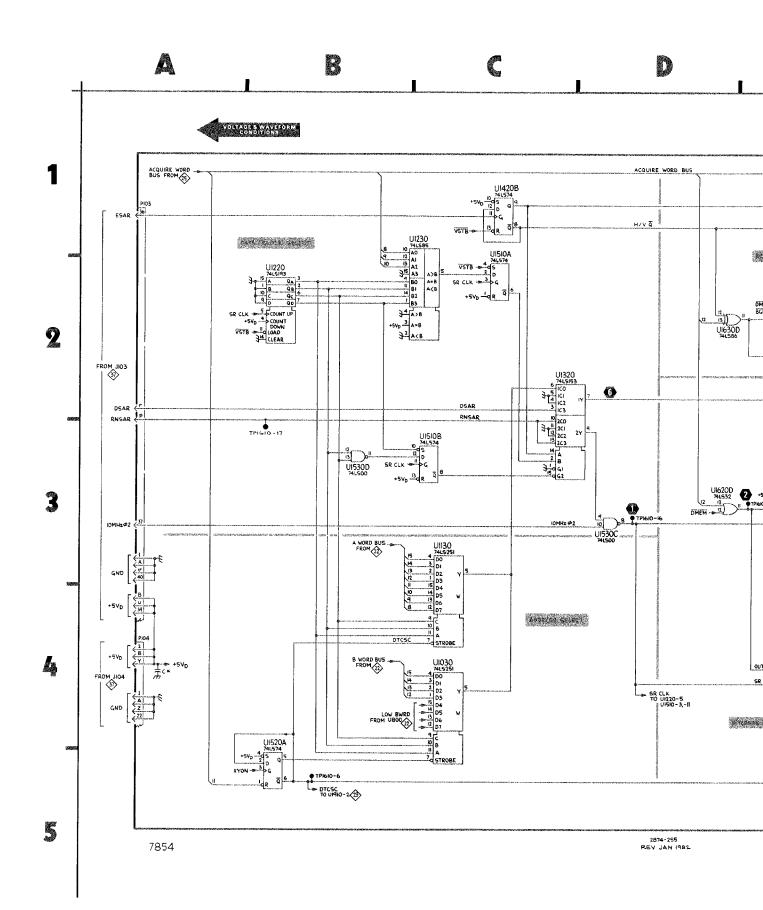

A Tektronix 7A26 Dual Trace Amplifier with controls set as follows: VOLTS/DIV (0.1 V); DISPLAY MODE (CH1); was installed in the LEFT VERT compartment of the 7854.

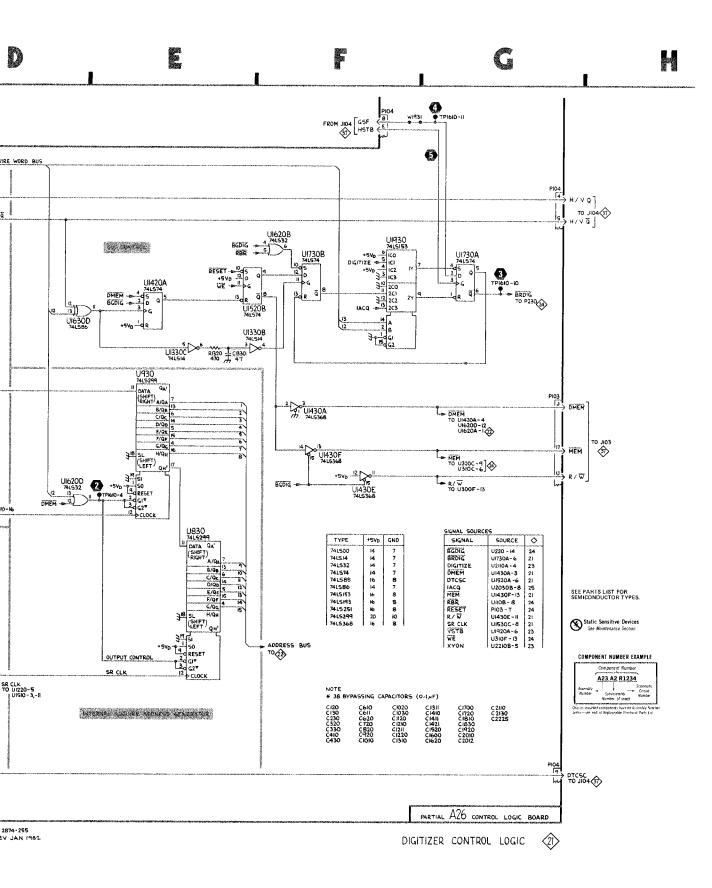

The 0.4 V CALIBRATOR signal was applied to the channel 1 bnc connector.

A Tektronix 7B15 Time Base with controls set as follows: TRIGGERING (NORM, AC, INT); TIME/DIV (1 ms); was installed in the B HORIZ compartment of the 7854.

Waveform 4 conditions: 7B15 TIME/DIV (500 µs).
